

Z-Stack Monitor and Test API

Document Number: SWRA198

Texas Instruments, Inc.
San Diego, California USA

| Version | Description | Date |
|---------|---|------------|
| 1.0 | Initial release | 09/06/2008 |
| 1.1 | Update address type for AUTOPEND | 04/02/2009 |
| 1.2 | Add MT_AF command and MT_ZDO callback for source routing | 06/25/2009 |
| 1.3 | Add MT_AF commands to support inter-pan Add MT_ZDO commands to support link key configuration Add MT_ZDO commands to MSG callback register/remove/indicate | 01/17/2010 |
| 1.4 | Add MT_UTIL commands for link key establishment Increase 'Length' field from uint8 to uint16 in MT_AF_DATA_REQUEST_EXT and MT_AF_INCOMING_MSG_EXT Add MT_AF_DATA_STORE and MT_AF_DATA_RETRIEVE Add MT_UTIL_DATA_REQ and UTIL_TEST_LOOPBACK Move MT_MAC_SRC_MATCH commands to MT_UTIL | 07/08/2010 |
| 1.5 | Add MT_ZDO commands to support manual joining procedure: <ul style="list-style-type: none"> ▪ MT_ZDO_NWK_DISCOVERY_REQ ▪ MT_ZDO_JOIN_REQ ▪ MT_ZDO_NWK_DISCOVERY_CNF ▪ MT_ZDO_BEACON_NOTIFY_IND ▪ MT_JOIN_CNF Add UTIL_APSME_LINK_KEY_NV_ID_GET command | 07/27/2010 |

1. Introduction

1.1 Scope

This document describes the Monitor and Test (MT) interface that is used for communication between the host tester and a ZigBee device through RS-232 serial port. Tester can issue MT commands to the ZigBee target through a PC application called Z-Tool. The target must be programmed with the latest Texas Instruments Z-Stack™.

1.2 Overview

MT interfaces are divided into categories, shown in the table below. Most interfaces can be disabled or enabled by a compile flag. Depending on the desired interfaces, certain flags need to be enabled during compilation. For a list of supported compile flags, check the “**Z-Stack Compile Option**” document.

| Interface | Description | Compile flags |
|------------|---|---------------------------------|
| MT_AF | This interface allows tester to interact with AF layer of the target. | MT_AF_FUNC MT_AF_CB_FUNC |
| MT_APP | This interface allows tester to interact with APP layer of the target to control custom tests such as test profile or user-defined test. | MT_APP_FUNC |
| MT_DEBUG | This interface allows tester to control the debug-messaging mechanism such as debug threshold, debug messages...etc | MT_DEBUG_FUNC |
| MT_NWK | This interface allows tester to interact with NWK layer of the target. | MT_NWK_FUNC MT_NWK_CB_FUNC |
| MT_SAPI | This interface allows tester to interact with simple API interface. | MT_SAPI_FUNC MT_SAPI_CB_FUNC |
| MT_SYS | This interface allows the tester to interact with the target at system level such as reset, read/write memory, read/write extended address...etc. | MT_SYS_FUNC |
| MT_TASK | This interface handles communication between the Monitor Test interface and Z-Stack. Tester has no control direct over this interface. | MT_TASK |
| MT_UART | This interface handles communication between the target and Z-Tool. Tester has no direct control over this interface. | N/A |
| MT_UTIL | This interface provides tester supporting functionalities such as setting PanId, getting device info, getting NV info, subscribing callbacks...etc. | MT_UTIL_FUNC |
| MT_VERSION | This interface contains information about the release version of the software. | N/A |
| MT_ZDO | This interface allows tester to interact with the ZDO layer of the target. | MT_ZDO_FUNC MT_ZDO_CB_FUNC |

1.3 Requirements

There are several requirements for a tester to interact with the ZigBee target through the MT interface:

- ZigBee target is programmed with Texas Instruments Z-Stack™ (ZStack-2.1.0 or newer).
- Z-Tool 2.0 or newer installed on the tester PC.
- PC is connected to ZigBee target though RS-232 serial port.

1.4 Acronyms

Table 1

| | |
|----------------|---|
| ADC | Analog to Digital Conversion |
| AF | Application Framework |
| AREQ | Asynchronous Request |
| FCS | Frame Check Sequence |
| MT | Monitor and Test |
| RPC | Remote Procedure Call |
| SAPI | Simple API |
| SOF | Start of Frame |
| SREQ | Synchronous Request |
| SRSP | Synchronous Response |
| Z-Stack | Texas Instruments ZigBee protocol stack |
| Z-Tool | Texas Instruments ZigBee PC-based test tool |

1.5 Reference Documents

- [1] Z-Stack Compile Options (SWRA188).

- [3] Z-Stack Developer's Guide (SWRA176)
- [4] Z-Stack Application Programming Interface (SWRA195)

2. Monitor and Test Transport Protocol

- A transport protocol is necessary so that messages can be exchanged between the tester and target over an RS-232 serial link. The purpose of the transport protocol is to frame the messages in packets for proper transmission and reception and to ensure message integrity.
- The physical transmission uses: no Parity; 8 data bits and 1 stop bits for each byte.
- The transmission rate will be 38.4 kbps, 57.6kbps and 115.2kbps
- The Z-Tool program must send one message at a time and wait for either the expected response message to a timeout before sending the next message or resending the current message.
- Fields that are multi-byte fields are transmitted Least Significant byte first (LSB). There is no provision for retransmission of lost packets

2.1 Format

2.1.1 General Serial Packet

- Serial packets are sent between the Z-Tool PC application and the target ZigBee device. They contain an SOF (Start of Frame), followed by a variable-length MT packet, and terminated by an FCS (Frame Check Sequence).
- Building of the serial packets is handled by MT_TransportSend() where the SOF is inserted at the beginning of the packet and FCS is computed and appended to the end of the packet.

| SOF | MT CMD | FCS |
|----------------|---------------|------------|
| Byte: 1 | 3-256 | 1 |

SOF (Start of Frame): This is a one byte field with value equal to **0xFE** that defines the start of each general serial packet.

MT CMD (Monitor Test Command): This contains 1 byte for the length of the actual data, 2 bytes for the MT command Id, and the data ranging from 0-250 bytes. Check 2.1.2 for more details.

FCS (Frame Check Sequence): This is a one byte field that is used to ensure packet integrity. This field is computed as an XOR of all the bytes in the message starting with LEN field and through the last byte of data. The receiver XORs all the received data bytes as indicated above and then XORs the received FCS field. If the sum is not equal to zero, the received packet is in error.

2.1.2 MT CMD

- MT CMD is the actually Monitor and Test command. It contains information that Z-Tool and Z-Stack need to control the target.
- It contains 1 byte for the length of the actual data, 2 bytes for the command, and data ranging from 0-250 bytes.

| LEN | CMD | DATA |
|---------|-----|-------|
| Byte: 1 | 2 | 0-250 |

LEN (Length): This one byte field is the number of bytes in the **DATA** field. If the **DATA** field contains no information this LEN field has a value of 0 and the total length of the **MT CMD** is 3 bytes (0 data message).

CMD (Command Id): This is a two byte field with a value denoting the Command Identification (Id) for this message. This field is described in detail below.

| CMD0 | | CMD1 |
|----------|-----------|------|
| Bit: 7-5 | 4-0 | 7-0 |
| Type | Subsystem | Id |

Type: Type for the command is described by bit 5, 6, 7 of CMD0 byte. The command type has one of the following values:

| Type | CMD0Value |
|------|-----------|
| POLL | 0x00 |
| SREQ | 0x20 |
| AREQ | 0x40 |
| SRSP | 0x60 |

- 0: POLL. A POLL command is used to retrieve queued data. This command is only applicable to SPI transport. For a POLL command the subsystem and Id are set to zero and data length is zero.
- 1: SREQ: A synchronous request that requires an immediate response. For example, a function call with a return value would use an SREQ command.
- 2: AREQ: An asynchronous request. For example, a callback event or a function call with no return value would use an AREQ command.
- 3: SRSP: A synchronous response. This type of command is only sent in response to a SREQ command. For an SRSP command the subsystem and Id are set to the same values as the corresponding SREQ. The length of an

SRSP is generally nonzero, so an SRSP with length=0 can be used to indicate an error.

- 4-7: Reserved.

Subsystem: The subsystem of the command is described by bit 0, 1, 2, 3, 4 of CMD0. The command subsystem has one of the following values:

| Subsystem | Subsystem Value |
|-----------------|-----------------|
| Reserved | 0x00 |
| SYS interface | 0x01 |
| MAC interface | 0x02 |
| NWK interface | 0x03 |
| AF interface | 0x04 |
| ZDO interface | 0x05 |
| SAPI interface | 0x06 |
| UTIL interface | 0x07 |
| DEBUG interface | 0x08 |
| APP interface | 0x09 |

Id: The command Id. The Id maps to a particular interface message. Range: 0-250.

DATA: This field contains the actual data to be transmitted. This is a field which varies in size according to the command. It can be 0 to 250.

2.2 Example

SYS_PING command will look like **0xFE 0x00 0x21 0x01 0x20**

| SOF | LEN | CMD0 | CMD1 | DATA | FCS |
|---------|------|------|------|------|------|
| Byte: 1 | 1 | 1 | 1 | 0 | 1 |
| 0xFE | 0x00 | 0x21 | 0x01 | N/A | 0x20 |

SYS_PING response will look like **0xFE 0x02 0x61 0x01 0x11 0x00 0x73**

| SOF | LEN | CMD0 | CMD1 | DATA0 | DATA1 | FCS |
|---------|------|------|------|-------|-------|------|
| Byte: 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 0xFE | 0x02 | 0x61 | 0x01 | 0x11 | 0x00 | 0x73 |

3. Monitor and Test Commands

3.1 Introduction

Monitor and Test commands (MT commands) exchanged between the target and the tester via a supported H/W medium (i.e. RS-232 or USB.) The tester controls the target using Z-Tool 2.0. In order for the target to communicate with Z-Tool 2.0, Z-Stack must be compiled with MT_SYS_FUNC. This enables the MT_SYS interface so Z-Tool 2.0 can communicate to establish the connection. Some MT interfaces support callbacks. This requires MT_UTIL_FUNC to be compiled with Z-Stack in order for the tester to subscribe callback. The corresponding MT interface must also be compiled with the

correct flag in order for the callbacks to be received and processed correctly by Z-Stack and Z-Tool 2.0. For the complete details on MT flags, check section 1.2 or “Z-Stack Compile Option” document (SWRA188).

Summary:

- Z-Tool 2.0 installed and connected to target using the supported H/W interface.
- Z-Stack must be compiled with MT_SYS_FUNC and MT_UTIL_FUNC.
- Z-Stack must be compiled with MT interface what tester will use.
- Z-Stack and Z-Tool must be set at the same baud rate, no Parity, 8 data-bits and 1 stop-bit for each byte.
- If the target supports flow control, this must be set correctly as well in Z-Tool 2.0

3.2 MT_AF

This interface allows the tester to interact with the Application Framework layer (AF).

3.2.1 MT_AF Commands

3.2.1.1 AF_REGISTER

Description:

This command enables the tester to register an application’s endpoint description.

Usage:

SREQ:

| | | | | | |
|--------------------|-------------|------------------|------------------|-------------------|-------------------|
| 1 | 1 | 1 | 1 | 2 | 2 |
| Length = 0x09-0x49 | Cmd0 = 0x24 | Cmd1 = 0x00 | EndPoint | AppProfId | AppDeviceId |
| 1 | 1 | 1 | 0-32 | 1 | 0-32 |
| AppDevVer | LatencyReq | AppNumInClusters | AppInClusterList | AppNumOutClusters | AppOutClusterList |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|---|
| EndPoint | 1 | Specifies the endpoint of the device |
| AppProfId | 2 | Specifies the profile Id of the application |
| AppDeviceId | 2 | Specifies the device description Id for this endpoint |
| AddDevVer | 1 | Specifies the device version number |
| LatencyReq | 1 | Specifies latency. 0x00-No latency 0x01-fast beacons 0x02-slow beacons |
| AppNumInClusters | 1 | the number of Input cluster Id’s following in the AppInClusterList |
| AppInClusterList | 32 | Specifies the list of Input Cluster Id’s |
| AppNumOutClusters | 1 | Specifies the number of Output cluster Id’s following in the AppOutClusterList |
| AppOutClusterList | 32 | Specifies the list of Output Cluster Id’s |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte:1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x64 | Cmd1 = 0x00 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.2.1.2 AF_DATA_REQUEST

Description:

This command is used by the tester to build and send a message through AF layer.

Usage:
SREQ:

| | | | | |
|--------------------|-------------|-------------|---------|-------------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x0A-0x8A | Cmd0 = 0x24 | Cmd1 = 0x01 | DstAddr | DstEndpoint |

| | | | | | | |
|-------------|-----------|---------|---------|--------|-----|-------|
| Byte: 1 | 2 | 1 | 1 | 1 | 1 | 0-128 |
| SrcEndpoint | ClusterId | TransId | Options | Radius | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| DstAddr | 2 | Short address of the destination device |
| DstEndpoint | 1 | Endpoint of the destination device |
| SrcEndpoint | 1 | Endpoint of the source device |
| ClusterId | 2 | Specifies the cluster ID |
| TransId | 1 | Specifies the transaction sequence number of the message. |
| Options | 1 | Transmit options bit mask according to the following defines from AF.h: bit 4: turns on/off 'APS ACK'; bit 5 sets "discover route"; bit 6 sets 'APS security'; bit 7 sets 'skip routing'. |
| Radius | 1 | Specifies the number of hops allowed delivering the message (see AF_DEFAULT_RADIUS.) |
| Len | 1 | Length of the data. |
| Data | 0-128 | 0-128 bytes data |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x64 | Cmd1 = 0x01 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.2.1.3 AF_DATA_REQUEST_EXT

Description:

This extended form of the AF_DATA_REQUEST must be used to send an inter-pan message (note that the target code must be compiled with the INTER_PAN flag defined.) This extended data request must also be used when making a request with a huge data byte count which is defined to be a size that would cause the RPC request to exceed the maximum allowed size:

$$MT_RPC_DATA_MAX - \text{sizeof}(AF_DATA_REQUEST_EXT)$$

Where `sizeof(AF_DATA_REQUEST_EXT)` counts everything but the data bytes and now stands at 20. When making an AF_DATA_REQUEST_EXT with a huge data byte count, the request shall not contain any data bytes. The huge data buffer is sent over separately as a sequence of one or more AF_DATA_STORE requests. Note that the outgoing huge message is timed-out in 15 seconds; thus all AF_DATA_STORE requests must be completed within 15 seconds of an AF_DATA_REQUEST_EXT with a huge data byte count. And any AF_DATA_REQUEST_EXT with a huge data byte count must be completed (or timed-out) before another will be started. The default timeout can be changed by defining the following to other values:

```
#if !defined MT_AF_EXEC_CNT
#define MT_AF_EXEC_CNT 15
#endif
#if !defined MT_AF_EXEC_DLY
#define MT_AF_EXEC_DLY 1000
#endif
```

Usage:

SREQ:

| | | | | | |
|--------------------|-------------|-------------|-------------|---------|-------------|
| 1 | 1 | 1 | 1 | 8 | 1 |
| Length = 0x14-0x93 | Cmd0 = 0x24 | Cmd1 = 0x02 | DstAddrMode | DstAddr | DstEndpoint |

| | | | | | | | |
|----------|-------------|-----------|---------|---------|--------|-----|-------|
| 2 | 1 | 2 | 1 | 1 | 1 | 1 | 0-128 |
| DstPanId | SrcEndpoint | ClusterId | TransId | Options | Radius | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|--|
| DstAddrMode | 1 | A value of 3 (the enumeration value for 'afAddr64Bit') indicates 8-byte (64-bit) address mode; otherwise a value of 2 indicates 2-byte (16-bit) address mode, using only the 2 LSB's of the DstAddr field to form a 2-byte short address. |
| DstAddr | 8 | LSB to MSB for the long or short address of the destination device (upper 6 bytes are don't care when short address.) |
| DstEndpoint | 1 | Endpoint of the destination device (but a don't care if the DstPanId is non-zero, which indicates an inter-pan message.) |
| DstPanId | 2 | PanId of the destination device: 0x0000=Intra-Pan; otherwise, Inter-Pan. |
| SrcEndpoint | 1 | Endpoint of the source device. |
| ClusterId | 2 | Specifies the cluster ID |
| TransId | 1 | Specifies the transaction sequence number of the message. |
| Options | 1 | Transmit options bit mask according to the following defines from AF.h: bit 4: turns on/off 'APS ACK'; bit 5 sets "discover route"; bit 6 sets 'APS security'; bit 7 sets 'skip routing'. (This is a don't care for an inter-pan message.) |
| Radius | 1 | Specifies the number of hops allowed delivering the message (reference DEF_NWK_RADIUS.) |
| Len | 2 | Length of the data. If a large data length causes the MT command to exceed MT_RPC_DATA_MAX, then zero bytes of the data shall be sent with this request and the data shall be transferred in as many MT_AF_DATA_STORE requests as necessary. |
| Data | 0-128 | 0-128 bytes data |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x64 | Cmd1 = 0x02 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.2.1.4 AF_DATA_REQUEST_SRC_RTG**Description:**

This command is used by the tester to build and send a message through AF layer using source routing.

Usage:**SREQ:**

| | | | | |
|--------------------|-------------|-------------|---------|-------------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x0B-0xFA | Cmd0 = 0x24 | Cmd1 = 0x03 | DstAddr | DstEndpoint |

| | | | | | | | | |
|-------------|-----------|---------|---------|--------|-----------------|-----------|-----|-------|
| Byte: 1 | 2 | 1 | 1 | 1 | 1 | 2N | 1 | 0-128 |
| SrcEndpoint | ClusterId | TransId | Options | Radius | Relay Count (N) | RelayList | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| DstAddr | 2 | Short address of the destination device |
| DstEndpoint | 1 | Endpoint of the destination device |
| SrcEndpoint | 1 | Endpoint of the source device |
| ClusterId | 2 | Specifies the cluster ID |
| TransId | 1 | Specifies the transaction sequence number of the message. |
| Options | 1 | Transmit options bit mask: Bit 0: turns on/off 'APS ACK'; bit 2 sets 'APS security'; bit 3 sets 'skip routing'. |
| Radius | 1 | Specifies the number of hops allowed delivering the message (reference DEF_NWK_RADIUS.) |

| | | |
|-------------|-------|---|
| Relay Count | 1 | Specifies the number of devices in the relay list for source routing |
| Relay List | 2N | List of relay devices on the source routing path. For each device, it contains 2 bytes short address for each device. |
| Len | 1 | Length of the data. |
| Data | 0-128 | 0-128 bytes data |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x64 | Cmd1 = 0x03 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Memory Failure (0x10). |

3.2.1.5 AF_INTER_PAN_CTL**Description:**

Inter-Pan control command and data. The data content depends upon the command and the available commands are enumerated as InterPanCtl_t.

Usage:**SREQ:**

| | | | | |
|--------------------|-------------|-------------|---------|------|
| Byte: 1 | 1 | 1 | 1 | 0-3 |
| Length = 0x01-0x04 | Cmd0 = 0x24 | Cmd1 = 0x10 | Command | Data |

Data:

| Command | Data Length (byte) | Description |
|----------------|--------------------|---|
| 0: InterPanClr | 0 | Proxy call to StubAPS_SetIntraPanChannel() to switch channel back to the NIB-specified channel. |
| 1: InterPanSet | 1 | Proxy call to StubAPS_SetInterPanChannel() with the 1-byte channel specified. |
| 2: InterPanReg | 1 | If the 1-byte Endpoint specified by the data argument is found by invoking affFindEndPointDesc(), then proxy a call to StubAPS_RegisterApp() with the pointer to the endPointDesc_t found (i.e. the Endpoint must already be registered with AF). |
| 3: InterPanChk | 3 | Proxy a call to StubAPS_InterPan() with the 2-byte PanId (LSB:MSB) and 1-byte EndPoint data. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x64 | Cmd1 = 0x10 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Success (0) Failure (0x10) if a channel change is in progress Invalid_Parameter (0x02). ZApsNotAllowed (0xBA) if MAC is not in an Idle state. |

3.2.1.6 AF_DATA_STORE**Description:**

Huge AF data request data buffer store command and data.

Usage:**SREQ:**

| | | | | | |
|---------|---|---|---|---|-------|
| Byte: 1 | 1 | 1 | 2 | 1 | 0-252 |
|---------|---|---|---|---|-------|

Length = 0x03-0xFA Cmd0 = 0x24 Cmd1 = 0x11 Index Length Data

Attributes:

| Command | Length (byte) | Description |
|---------|---------------|---|
| Index | 2 | Specifies the index into the outgoing data request data buffer to start the storing of this chunk of data. |
| Length | 1 | Specifies the length of this data chunk to store. A length of zero is special and triggers the actually sending of the data request OTA. |
| Data | 0-252 | Contains 0 to 252 bytes of data. |

SRSP:

| | | | |
|---------------|-------------|-------------|-----------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x64 | Cmd1 = 0x11 | AF-Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | afStatus_SUCCESS 0x00 |
| | | afStatus_FAILED 0x01 |
| | | afStatus_MEM_FAIL 0x10 |
| | | afStatus_INVALID_PARAMETER 0x02 |
| | | Note that the status is for storing a chunk of data when Length is not zero and the return value of the AF_DataRequest() when it is zero. |

3.2.1.7 AF_DATA_RETRIEVE**Description:**

Huge AF incoming message data buffer retrieve command.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|-----------|-------|--------|
| Byte: 1 | 1 | 1 | 4 | 2 | 1 |
| Length = 0x07 | Cmd0 = 0x24 | Cmd1 = 0x12 | Timestamp | Index | Length |

Attributes:

| Command | Length | Description |
|-----------|--------|---|
| Timestamp | 4 | The timestamp of the incoming message in order to uniquely Identify it in a queue of incoming huge messages. |
| Index | 2 | Specifies the index into the incoming message data buffer to start the retrieving of this chunk of data. |
| Length | 1 | Specifies the length of this data chunk to retrieve. A length of zero is special and triggers the freeing of the corresponding incoming message. |

SRSP:

| | | | | | |
|--------------------|-------------|-------------|-----------|--------|-------|
| Byte: 1 | 1 | 1 | 1 | 1 | 0-253 |
| Length = 0x02-0xFA | Cmd0 = 0x64 | Cmd1 = 0x12 | AF-Status | Length | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | afStatus_SUCCESS 0x00 |
| | | afStatus_FAILED 0x01 |
| | | afStatus_MEM_FAIL 0x10 |
| | | afStatus_INVALID_PARAMETER 0x02 |
| Length | 1 | Specifies the length of this data chunk retrieved. |
| Data | 0-253 | The length of data bytes requested from the specified index into the huge incoming message data buffer. |

3.2.2 MT_AF Callbacks

3.2.2.1 AF_DATA_CONFIRM

Description:

This command is sent by the device to the user after it receives a data request.

Usage:
AREQ:

| | | | | | |
|---------------|-------------|-------------|--------|----------|---------|
| Byte: 1 | 1 | 1 | 1 | 1 | 1 |
| Length = 0x03 | Cmd0 = 0x44 | Cmd1 = 0x80 | Status | Endpoint | TransId |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |
| Endpoint | 1 | Endpoint of the device |
| TransId | 1 | Specified the transaction sequence number of the message |

3.2.2.2 AF_INCOMING_MSG

Description:

This callback message is in response to incoming data to any of the registered endpoints on this device.

Usage:
AREQ:

| | | | | | | | |
|--------------------|--------------|-------------|-------------|-----------|----------------|-------------|-------|
| 1 | 1 | 1 | 2 | 2 | 2 | 1 | |
| Length = 0x11-0x91 | Cmd0 = 0x44 | Cmd1 = 0x81 | GroupId | ClusterId | SrcAddr | SrcEndpoint | |
| 1 | 1 | 1 | 1 | 4 | 1 | 1 | 0-128 |
| DstEndpoint | WasBroadcast | LinkQuality | SecurityUse | Timestamp | TransSeqNumber | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| GroupId | 2 | Specifies the group ID of the device |
| ClusterId | 2 | Specifies the cluster Id (only the LSB is used in V1.0 networks.) |
| SrcAddr | 2 | Specifies the ZigBee network address of the source device sending the message. |
| SrcEndpoint | 1 | Specifies the source endpoint of the message |
| DstEndpoint | 1 | Specifies the destination endpoint of the message |
| WasBroadcast | 1 | Specifies if the message was a broadcast or not |
| LinkQuality | 1 | Indicates the link quality measured during reception |
| SecurityUse | 1 | Specifies if the security is used or not |
| TimeStamp | 4 | Specifies the timestamp of the message |
| TransSeqNumber | 1 | Specifies transaction sequence number of the message |
| Len | 1 | Specifies the length of the data. |
| Data | 0-128 | Contains 0 to 128 bytes of data. |

3.2.2.3 AF_INCOMING_MSG_EXT

Description:

This callback message is in response to incoming data to any of the registered endpoints on this device when the code is compiled with the INTER_PAN flag defined. This extended incoming message indication must also be used when handling an incoming message with a huge data byte count which is defined to be a size that would cause the RPC request to exceed the maximum allowed size:

MT_RPC_DATA_MAX - sizeof(AF_INCOMING_MSG_EXT)

Where sizeof(AF_INCOMING_MSG_EXT) counts everything but the data bytes and now stands at 27. An AF_INCOMING_MSG_EXT with a huge data byte count indication shall not contain any data bytes. The huge data buffer must be retrieved separately as a sequence of one or more AF_DATA_RETRIEVE requests. Note that the incoming huge message is timed-out in 15

seconds after receiving it; thus all AF_DATA_RETRIEVE requests must be completed within 15 seconds of an AF_INCOMING_MSG_EXT with a huge data byte count. Note that multiple AF_INCOMING_MSG_EXT indications with huge data byte counts may be queued, and each will be timed-out separately. The default timeout can be changed by defining the following to other values:

```
#if !defined MT_AF_EXEC_CNT
#define MT_AF_EXEC_CNT 15
#endif
#if !defined MT_AF_EXEC_DLY
#define MT_AF_EXEC_DLY 1000
#endif
```

Usage:**AREQ:**

| | | | | | | | | |
|--------------------|-------------|--------------|-------------|-------------|--------------|----------------|-------------|-------|
| 1 | 1 | 1 | 2 | 2 | 1 | 8 | 1 | |
| Length = 0x1B-0x9A | Cmd0 = 0x44 | Cmd1 = 0x82 | GroupId | ClusterId | SrcAddr Mode | SrcAddr | SrcEndpoint | |
| 2 | 1 | 1 | 1 | 1 | 4 | 1 | 1 | 0-128 |
| SrcPanId | DstEndpoint | WasBroadcast | LinkQuality | SecurityUse | Timestamp | TransSeqNumber | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| GroupId | 2 | Specifies the group ID of the device |
| ClusterId | 2 | Specifies the cluster Id (only the LSB is used in V1.0 networks.) |
| SrcAddrMode | 1 | A value of 3 (i.e. the enumeration value for 'afAddr64Bit') indicates 8-byte/64-bit address mode; otherwise, only the 2 LSB's of the 8 bytes are used to form a 2-byte short address. |
| SrcAddr | 8 | LSB to MSB for the long or short address of the destination device (upper 6 bytes are don't care when short address.) |
| SrcEndpoint | 1 | Specifies the source endpoint of the message |
| SrcPanId | 2 | Specifies the source PanId of the message. |
| DstEndpoint | 1 | Specifies the destination endpoint of the message |
| WasBroadcast | 1 | Specifies if the message was a broadcast or not |
| LinkQuality | 1 | Indicates the link quality measured during reception |
| SecurityUse | 1 | Specifies if the security is used or not |
| TimeStamp | 4 | Specifies the timestamp of the message |
| TransSeqNumber | 1 | Specifies transaction sequence number of the message |
| Len | 2 | Specifies the length of the data. If a large data length causes the MT command to exceed MT_RPC_DATA_MAX, then zero bytes of the data shall be sent with this request and the host shall retrieve the data with as many MT_AF_DATA_RETRIEVE requests as necessary. |
| Data | 0-128 | Contains 0 to 128 bytes of data. |

3.3 MT_APP

This interface allows tester to interact with APP layer of the target to control custom tests such as test profile or user-defined test.

3.3.1 MT_APP Commands

3.3.1.1 APP_MSG

Description:

This command is sent to the target in order to test the functions defined for individual applications. This command sends a raw data to an application.

Usage:**SREQ:**

| | | | | |
|--------------------|-------------|-------------|-------------|-------------|
| Byte: 1 | 1 | 1 | 1 | 2 |
| Length = 0x07-0x87 | Cmd0 = 0x29 | Cmd1 = 0x00 | AppEndpoint | DestAddress |

| | | | |
|--------------|-----------|--------|---------|
| 1 | 2 | 1 | 0-128 |
| DestEndpoint | ClusterId | MsgLen | Message |

Attributes:

| Attribute | Length (byte) | Description |
|--------------|---------------|--|
| AppEndpoint | 1 | Application endpoint of the outgoing message |
| DestAddress | 2 | Destination address of the outgoing message |
| DestEndpoint | 1 | Destination endpoint of the outgoing message |
| ClusterId | 2 | Cluster Id of the outgoing message |
| MsgLen | 1 | Length of the outgoing message |
| Message | 0-128 | Raw data packet to send to the application |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x69 | Cmd1 = 0x00 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.3.1.2 APP_USER_TEST**Description:**

This command is used by tester to issue user's defined commands to the application.

Usage:**SREQ:**

| | | | | | | |
|---------------|-------------|-------------|-------|-----------|------------|------------|
| Byte: 1 | 1 | 1 | 1 | 2 | 2 | 2 |
| Length = 0x07 | Cmd0 = 0x29 | Cmd1 = 0x01 | SrcEP | CommandId | Parameter1 | Parameter2 |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|---|
| SrcEP | 1 | Source Endpoint of the user-defined command |
| CommandId | 2 | Command Id of the user-defined command |
| Parameter1 | 2 | Parameter #1 of the command |
| Parameter2 | 2 | Parameter #2 of the command |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x69 | Cmd1 = 0x01 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.3.2 MT_APP Callbacks

NONE

3.4 MT_DEBUG

This interface allows tester to control the debug-messaging mechanism such as debug threshold, debug messages...etc

3.4.1 MT_DEBUG Commands

3.4.1.1 DEBUG_SET_THRESHOLD

Description:

This command allows the user to set the threshold for the debug message

Usage:
SREQ:

| | | | | |
|---------------|-------------|-------------|-------------|-----------|
| Byte: 1 | 1 | 1 | 1 | 1 |
| Length = 0x03 | Cmd0 = 0x28 | Cmd1 = 0x00 | ComponentId | Threshold |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| ComponentId | 1 | Uniquely Identifies a particular software component on the target |
| Threshold | 1 | Specifies the threshold value for reporting debug messages by that software component |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x68 | Cmd1 = 0x00 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.4.1.2 DEBUG_MSG

Description:

This command sends a debug string to Z-Tool. The content of the string is defined by the application.

Usage:
AREQ:

| | | | | |
|--------------------|-------------|-------------|--------|--------|
| Byte: 1 | 1 | 1 | 1 | 0-254 |
| Length = 0x01-0xFA | Cmd0 = 0x48 | Cmd1 = 0x00 | Length | String |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--------------------------------------|
| Length | 1 | Length of the string |
| String | 0-254 | String to be displayed by Z-Tool 2.0 |

3.4.2 MT_DEBUG Callbacks

NONE

3.5 MT_MAC

This interface allows tester to interact with the TI-MAC

3.5.1 MT_MAC Commands

3.5.1.1 MAC_RESET_REQ

Description:

This command is used to send a MAC Reset command to reset MAC state machine.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|------------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x02 | Cmd0 = 0x22 | Cmd1 = 0x01 | SetDefault |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--|
| SetDefault | 1 | TRUE – Set the MAC pib values to default values. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x00 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.2 MAC_INIT

Description:

This command is used to initialize the MAC.

Usage:**SREQ:**

| | | |
|---------------|-------------|-------------|
| Byte: 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x22 | Cmd1 = 0x02 |

Attributes:

None

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x02 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.3 MAC_START_REQ

Description:

This command is used to start the MAC as a coordinator or end device.

Usage:**SREQ:**

| | | | | | | |
|---------------|-------------|-------------|-----------|-------|----------------|-------------|
| Byte: 1 | 1 | 1 | 4 | 2 | 1 | 1 |
| Length = 0x1C | Cmd0 = 0x22 | Cmd1 = 0x03 | StartTime | PanId | LogicalChannel | ChannelPage |

| | | | | | |
|-------------|-----------------|----------------|----------------|----------------|------------------|
| Byte: 1 | 1 | 1 | 1 | 1 | 8 |
| BeaconOrder | SuperFrameOrder | PanCoordinator | BatteryLifeExt | CoordRealignmt | RealignKeySource |

| | | | | |
|----------------------|------------------|-----------------|-----------------|---------------------|
| Byte: 1 | 1 | 1 | 8 | 1 |
| RealignSecurityLevel | RealignKeyIdMode | RealignKeyIndex | BeaconKeySource | BeaconSecurityLevel |

| | |
|-----------------|----------------|
| Byte: 1 | 1 |
| BeaconKeyIdMode | BeaconKeyIndex |

Attributes:

| Attribute | Length (byte) | Description |
|------------------|---------------|--|
| StartTime | 4 | The time to begin transmitting beacons relative to the received beacon |
| PanId | 2 | The PAN Id to use. This parameter is ignored if Pan Coordinator is FALSE |
| LogicalChannel | 1 | The logical channel to use. This parameter is ignored if Pan Coordinator is FALSE |
| ChannelPage | 1 | The channel page to use. This parameter is ignored if Pan Coordinator is FALSE |
| BeaconOrder | 1 | The exponent used to calculate the beacon interval |
| SuperFrameOrder | 1 | The exponent used to calculate the superframe duration |
| PanCoordinator | 1 | Set to TRUE to start a network as PAN coordinator |
| BatteryLifeExt | 1 | If this value is TRUE, the receiver is disabled after MAC_BATT_LIFE_EXT_PERIODS full backoff periods following the interframe spacing period of the beacon frame |
| CoordRealignment | 1 | Coordinator Realignment |
| RealignKeySource | 8 | Key Source of this data frame |

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

Key Id Mode of this data frame:

| Key Id Mode | Value |
|-----------------|-------|
| NOT_USED | 0x00 |
| KEY_1BYTE_INDEX | 0x01 |
| KEY_4BYTE_INDEX | 0x02 |
| KEY_8BYTE_INDEX | 0x03 |

RealignKeyIndex 1 Key Index of this data frame

BeaconKeySource 8 Key Source of this data frame

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

BeaconKeyIdMode 1 Key Id Mode of this data frame

BeaconKeyIndex 1 Key Index of this data frame

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x03 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.4 MAC_SYNC_REQ**Description:**

This command is used to request synchronization to the current network beacon

Usage:

SREQ:

| | | | | | |
|---------------|-------------|-------------|----------------|-------------|-------------|
| Byte: 1 | 1 | 1 | 1 | 1 | 1 |
| Length = 0x03 | Cmd0 = 0x22 | Cmd1 = 0x04 | LogicalChannel | ChannelPage | TrackBeacon |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| LogicalChannel | 1 | The logical channel to use. |
| ChannelPage | 1 | The channel page to use. |
| TrackBeacon | 1 | Set to TRUE to continue tracking beacons after synchronizing with the first beacon. Set to FALSE to only synchronize with the first beacon |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x04 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.5 MAC_DATA_REQ

Description:

This command is used to send (on behalf of the next higher layer) MAC Data Frame packet.

Usage:

SREQ:

| | | | | | |
|---------------------|-------------|-------------|-----------------|-------------|-----------|
| Byte: 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x15-0x114 | Cmd0 = 0x22 | Cmd1 = 0x05 | DestAddressMode | DestAddress | DestPanId |

| | | | | | | | |
|----------------|--------|----------|----------------|-------|-----------|---------------|-----------|
| Byte: 1 | 1 | 1 | 1 | 1 | 8 | 1 | 1 |
| SrcAddressMode | Handle | TxOption | LogicalChannel | Power | KeySource | SecurityLevel | KeyIdMode |

| | | |
|----------|------------|-------|
| Byte: 1 | 1 | 0-250 |
| KeyIndex | MSDULength | MSDU |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | |
|---------------------|---------------|---|------|-------|-------------|---------------------|------|---------------------|---------------|------|---------------|----------------|------|----------------|----------------|------|----------------|-----------|------|-----------|
| | | Specifies the format of the destination address. | | | | | | | | | | | | | | | | | | |
| DestAddressMode | 1 | <table border="1"> <thead> <tr> <th>Mode</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr> <tr> <td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr> <tr> <td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr> <tr> <td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr> <tr> <td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr> </tbody> </table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |
| Mode | Value | Description | | | | | | | | | | | | | | | | | | |
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | | | | | | | | | | | | | | | | | | |
| GROUP_ADDRESS | 0x01 | Group address | | | | | | | | | | | | | | | | | | |
| ADDRESS_16_BIT | 0x02 | Address 16 bit | | | | | | | | | | | | | | | | | | |
| ADDRESS_64_BIT | 0x03 | Address 64 bit | | | | | | | | | | | | | | | | | | |
| BROADCAST | 0xFF | Broadcast | | | | | | | | | | | | | | | | | | |
| DestAddress | 8 | Address of the destination. | | | | | | | | | | | | | | | | | | |
| DestPanId | 2 | PAN Id of the destination. | | | | | | | | | | | | | | | | | | |

Specifies the format of the source address.

| Mode | Value | Description |
|---------------------|-------|---------------------|
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present |
| GROUP_ADDRESS | 0x01 | Group address |
| ADDRESS_16_BIT | 0x02 | Address 16 bit |
| ADDRESS_64_BIT | 0x03 | Address 64 bit |
| BROADCAST | 0xFF | Broadcast |

Handle of the packet.

Transmitting options:

| Option | Value | Description |
|-------------------------|-------|--|
| MAC_TXOPTION_ACK | 0x01 | Acknowledged transmission. The MAC will attempt to retransmit the frame until it is acknowledged |
| MAC_TXOPTION_GTS | 0x02 | GTS transmission (unused) |
| MAC_TXOPTION_INDIRECT | 0x04 | Indirect transmission. The MAC will queue the data and wait for the destination device to poll for it. This can only be used by a coordinator device |
| MAC_TXOPTION_NO_RETRANS | 0x10 | This proprietary option prevents the frame from being retransmitted |
| MAC_TXOPTION_NO_CNF | 0x20 | This proprietary option prevents a MAC_MCPS_DATA_CNF event from being sent for this frame |
| MAC_TXOPTION_ALT_BE | 0x40 | Use PIB value MAC_ALT_BE for the minimum backoff exponent |
| MAC_TXOPTION_PWR_CHAN | 0x80 | Use the power and channel values in macDataReq_t instead of the PIB values |

Channel that data frame will be transmitted.
Power level that data frame will be transmitted.
Key Source of this data frame.

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

Key Id Mode of this data frame:

| Key Id Mode | Value |
|-----------------|-------|
| NOT_USED | 0x00 |
| KEY_1BYTE_INDEX | 0x01 |
| KEY_4BYTE_INDEX | 0x02 |
| KEY_8BYTE_INDEX | 0x03 |

Key Index of this data frame.
Length of the data.
Actual data that will be sent.

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x05 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.6 MAC_ASSOCIATE_REQ**Description:**

This command is used to request (on behalf of the next higher layer) an association with a coordinator

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|----------------|-------------|------------------|
| Byte: 1 | 1 | 1 | 1 | 1 | 1 |
| Length = 0x12 | Cmd0 = 0x22 | Cmd1 = 0x06 | LogicalChannel | ChannelPage | CoordAddressMode |

| | | | | | | |
|--------------|------------|-----------------------|-----------|---------------|-----------|----------|
| Byte: 8 | 2 | 1 | 8 | 1 | 1 | 1 |
| CoordAddress | CoordPanId | CapabilityInformation | KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | |
|------------------------|---------------|--|----------------|-------|-------------|---------------------|-------------|---------------------|---------------|------|---------------|----------------|----------------|----------------|-----------------------|------|-----------------------|-----------|------------------------|-----------|
| LogicalChannel | 1 | Channel that data frame will be transmitted. | | | | | | | | | | | | | | | | | | |
| ChannelPage | 1 | The channel page to be used. | | | | | | | | | | | | | | | | | | |
| | | Specifies the format of the coordinator address. | | | | | | | | | | | | | | | | | | |
| CoordAddressMode | 1 | <table><tr><th>Mode</th><th>Value</th><th>Description</th></tr><tr><td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr><tr><td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr><tr><td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr><tr><td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr><tr><td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr></table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |
| Mode | Value | Description | | | | | | | | | | | | | | | | | | |
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | | | | | | | | | | | | | | | | | | |
| GROUP_ADDRESS | 0x01 | Group address | | | | | | | | | | | | | | | | | | |
| ADDRESS_16_BIT | 0x02 | Address 16 bit | | | | | | | | | | | | | | | | | | |
| ADDRESS_64_BIT | 0x03 | Address 64 bit | | | | | | | | | | | | | | | | | | |
| BROADCAST | 0xFF | Broadcast | | | | | | | | | | | | | | | | | | |
| CoordAddress | 8 | Address of the Coordinator. | | | | | | | | | | | | | | | | | | |
| CoordPanId | 2 | PAN Id of the coordinator. | | | | | | | | | | | | | | | | | | |
| | | Bit map which specifies the operational capabilities of the device. | | | | | | | | | | | | | | | | | | |
| CapabilityInformation | 1 | Bit: 0 – Alternate PAN Coordinator 1 – Device type: 1- ZigBee Router; 0 – End Device 2 – Power Source: 1 Main powered 3 – Receiver on when Idle 4 – Reserved 5 – Reserved 6 – Security capability 7 – Reserved | | | | | | | | | | | | | | | | | | |
| KeySource | 8 | Key Source of this data frame | | | | | | | | | | | | | | | | | | |
| | | Security Level of this data frame: | | | | | | | | | | | | | | | | | | |
| SecurityLevel | 1 | <table><tr><th>Security Level</th><th>Value</th></tr><tr><td>NO_SECURITY</td><td>0x00</td></tr><tr><td>MIC_32_AUTH</td><td>0x01</td></tr><tr><td>MIC_64_AUTH</td><td>0x02</td></tr><tr><td>MIC_128_AUTH</td><td>0x03</td></tr><tr><td>AES_ENCRYPTION</td><td>0x04</td></tr><tr><td>AES_ENCRYPTION_MIC_32</td><td>0x05</td></tr><tr><td>AES_ENCRYPTION_MIC_64</td><td>0x06</td></tr><tr><td>AES_ENCRYPTION_MIC_128</td><td>0x07</td></tr></table> | Security Level | Value | NO_SECURITY | 0x00 | MIC_32_AUTH | 0x01 | MIC_64_AUTH | 0x02 | MIC_128_AUTH | 0x03 | AES_ENCRYPTION | 0x04 | AES_ENCRYPTION_MIC_32 | 0x05 | AES_ENCRYPTION_MIC_64 | 0x06 | AES_ENCRYPTION_MIC_128 | 0x07 |
| Security Level | Value | | | | | | | | | | | | | | | | | | | |
| NO_SECURITY | 0x00 | | | | | | | | | | | | | | | | | | | |
| MIC_32_AUTH | 0x01 | | | | | | | | | | | | | | | | | | | |
| MIC_64_AUTH | 0x02 | | | | | | | | | | | | | | | | | | | |
| MIC_128_AUTH | 0x03 | | | | | | | | | | | | | | | | | | | |
| AES_ENCRYPTION | 0x04 | | | | | | | | | | | | | | | | | | | |
| AES_ENCRYPTION_MIC_32 | 0x05 | | | | | | | | | | | | | | | | | | | |
| AES_ENCRYPTION_MIC_64 | 0x06 | | | | | | | | | | | | | | | | | | | |
| AES_ENCRYPTION_MIC_128 | 0x07 | | | | | | | | | | | | | | | | | | | |

Key Id Mode of this data frame:

| | | | |

| KeyIdMode | 1 | Key Id Mode | Value |
| | | NOT_USED | 0x00 |
| | | KEY_1BYTE_INDEX | 0x01 |
| | | KEY_4BYTE_INDEX | 0x02 |
| KeyIndex | 1 | KEY_8BYTE_INDEX | 0x03 |
| | | Key Index of this data frame. | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x06 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.7 MAC_ASSOCIATE_RSP

Description:

This command is sent by the host to response to the MAC_ASSOCIATE_IND.

Usage:

SREQ:

| | | | | | |
|---------------|-------------|-------------|---------|-------------------|-------------|
| Byte: 1 | 1 | 1 | 8 | 2 | 1 |
| Length = 0x0B | Cmd0 = 0x42 | Cmd1 = 0x50 | ExtAddr | AssocShortAddress | AssocStatus |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| ExtAddr | 8 | Extended Address of the device requesting association |
| AssocShortAddress | 2 | Short address for the associated device. Allocated by the coordinator. |

Status of the association:

| | | | |
|-------------|---|------------------------|-------|
| AssocStatus | 1 | Status | Value |
| | | SUCCESSFUL_ASSOCIATION | 0x00 |
| | | PAN_AT_CAPACITY | 0x01 |
| | | PAN_ACCESS_DENIED | 0x02 |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x50 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.8 MAC_DISASSOCIATE_REQ

Description:

This command is used to request (on behalf of the next higher layer) a disassociation of the device from the coordinator.

Usage:

SREQ:

| | | | | | |
|---------------|-------------|-------------|-------------------|---------------|-------------|
| Byte: 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x18 | Cmd0 = 0x22 | Cmd1 = 0x07 | DeviceAddressMode | DeviceAddress | DevicePanId |

| | | | | | |
|--------------------|------------|-----------|---------------|-----------|----------|
| Byte: 1 | 1 | 8 | 1 | 1 | 1 |
| DisassociateReason | TxIndirect | KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | |
|------------------------|---------------|--|----------------|-------|-------------|---------------------|-----------------------|---------------------|------------------|------|-----------------|----------------|----------------|----------------|-----------------------|------|-----------------------|-----------|------------------------|-----------|
| | | Specifies the format of the device address. | | | | | | | | | | | | | | | | | | |
| DeviceAddressMode | 1 | <table><tr><th>Mode</th><th>Value</th><th>Description</th></tr><tr><td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr><tr><td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr><tr><td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr><tr><td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr><tr><td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr></table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |
| Mode | Value | Description | | | | | | | | | | | | | | | | | | |
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | | | | | | | | | | | | | | | | | | |
| GROUP_ADDRESS | 0x01 | Group address | | | | | | | | | | | | | | | | | | |
| ADDRESS_16_BIT | 0x02 | Address 16 bit | | | | | | | | | | | | | | | | | | |
| ADDRESS_64_BIT | 0x03 | Address 64 bit | | | | | | | | | | | | | | | | | | |
| BROADCAST | 0xFF | Broadcast | | | | | | | | | | | | | | | | | | |
| DeviceAddress | 8 | Device Address. | | | | | | | | | | | | | | | | | | |
| DevicePanId | 2 | Network PAN Id of device. | | | | | | | | | | | | | | | | | | |
| | | Reason of disassociation: | | | | | | | | | | | | | | | | | | |
| DisassociateReason | 1 | <table><tr><th>Reason</th><th>Value</th></tr><tr><td>RESERVED</td><td>0x00</td></tr><tr><td>COOR_WISHES_DEV_LEAVE</td><td>0x01</td></tr><tr><td>DEV_WISHES_LEAVE</td><td>0x02</td></tr></table> | Reason | Value | RESERVED | 0x00 | COOR_WISHES_DEV_LEAVE | 0x01 | DEV_WISHES_LEAVE | 0x02 | | | | | | | | | | |

| KEY_4BYTE_INDEX | 0x02 | | | | | | | | | | | | | | | | | | | |
| KEY_8BYTE_INDEX | 0x03 | | | | | | | | | | | | | | | | | | | |
| KeyIndex | 1 | Key Index of this data frame. | | | | | | | | | | | | | | | | | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x07 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.9 MAC_GET_REQ

Description:

This command is used to read (on behalf of the next higher layer) a MAC PIB attribute.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|-----------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x22 | Cmd1 = 0x08 | Attribute |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Specifies the MAC PIB Attributes:

| Attribute | 1 | MAC PIB Attribute | Value |
|-----------|---|-----------------------------------|-------|
| | | ZMAC_ACK_WAIT_DURATION | 0x40 |

| | | ZMAC_ALT_BE | 0xE3 |

SRSP:

| | | | | |
|---------------|-------------|-------------|--------|------|
| Byte: 1 | 1 | 1 | 1 | 16 |
| Length = 0x11 | Cmd0 = 0x62 | Cmd1 = 0x08 | Status | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |
| Data | 16 | 1-16 bytes value of the PIB attribute. |

3.5.1.10 MAC_SET_REQ

Description:

This command is used to request the device to write a MAC PIB value.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|-----------|----------------|
| Byte: 1 | 1 | 1 | 1 | 16 |
| Length = 0x11 | Cmd0 = 0x22 | Cmd1 = 0x09 | Attribute | AttributeValue |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Specified the MAC PIB Attribute:

| Attribute | Length (byte) | Description | Value |
|-----------|---------------|-----------------------------------|-------|
| | | MAC PIB Attribute | |
| | | ZMAC_ACK_WAIT_DURATION | 0x40 |
| | | ZMAC_ASSOCIATION_PERMIT | 0x41 |
| | | ZMAC_AUTO_REQUEST | 0x42 |
| | | ZMAC_BATT_LIFE_EXT | 0x43 |
| | | ZMAC_BATT_LEFT_EXT_PERIODS | 0x44 |
| | | ZMAC_BEACON_MSDU | 0x45 |
| | | ZMAC_BEACON_MSDU_LENGTH | 0x46 |
| | | ZMAC_BEACON_ORDER | 0x47 |
| | | ZMAC_BEACON_TX_TIME | 0x48 |
| | | ZMAC_BSN | 0x49 |
| | | ZMAC_COORD_EXTENDED_ADDRESS | 0x4A |
| | | ZMAC_COORD_SHORT_ADDRESS | 0x4B |
| | | ZMAC_DSN | 0x4C |
| | | ZMAC_GTS_PERMIT | 0x4D |
| | | ZMAC_MAX_CSMA_BACKOFFS | 0x4E |
| | | ZMAC_MIN_BE | 0x4F |
| | | ZMAC_PANID | 0x50 |
| | | ZMAC_PROMISCUOUS_MODE | 0x51 |
| | | ZMAC_RX_ON_IDLE | 0x52 |
| | | ZMAC_SHORT_ADDRESS | 0x53 |
| | | ZMAC_SUPERFRAME_ORDER | 0x54 |
| | | ZMAC_TRANSACTION_PERSISTENCE_TIME | 0x55 |
| | | ZMAC_ASSOCIATED_PAN_COORD | 0x56 |
| | | ZMAC_MAX_BE | 0x57 |
| | | ZMAC_FRAME_TOTAL_WAIT_TIME | 0x58 |
| | | ZMAC_MAC_FRAME_RETRIES | 0x59 |
| | | ZMAC_RESPONSE_WAIT_TIME | 0x5A |
| | | ZMAC_SYNC_SYMBOL_OFFSET | 0x5B |
| | | ZMAC_TIMESTAMP_SUPPORTED | 0x5C |
| | | ZMAC_SECURITY_ENABLED | 0x5D |
| | | ZMAC_PHY_TRANSMIT_POWER | 0xE0 |
| | | ZMAC_LOGICAL_CHANNEL | 0xE1 |
| | | ZMAC_EXTENDED_ADDRESS | 0xE2 |
| | | ZMAC_ALT_BE | 0xE3 |

AttributeValue 16 1-16 bytes of the PIB attribute value.

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x09 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.11 MAC_SCAN_REQ

Description:

This command is used to send a request to the device to perform a network scan.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|--------------|----------|--------------|
| Byte: 1 | 1 | 1 | 4 | 1 | 1 |
| Length = 0x13 | Cmd0 = 0x22 | Cmd1 = 0x0C | ScanChannels | ScanType | ScanDuration |

| | | | | | |
|-------------|------------|-----------|---------------|-----------|----------|
| Byte: 1 | 1 | 8 | 1 | 1 | 1 |
| ChannelPage | MaxResults | KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

This represents a bit-mask of channels to be scanned when starting the device:

| Channel | Value |
|--------------|------------|
| NONE | 0x00000000 |
| ALL_CHANNELS | 0x07FFF800 |
| CHANNEL 11 | 0x00000800 |
| CHANNEL 12 | 0x00001000 |
| CHANNEL 13 | 0x00002000 |
| CHANNEL 14 | 0x00004000 |
| CHANNEL 15 | 0x00008000 |
| CHANNEL 16 | 0x00010000 |
| CHANNEL 17 | 0x00020000 |
| CHANNEL 18 | 0x00040000 |
| CHANNEL 19 | 0x00080000 |
| CHANNEL 20 | 0x00100000 |
| CHANNEL 21 | 0x00200000 |
| CHANNEL 22 | 0x00400000 |
| CHANNEL 23 | 0x00800000 |
| CHANNEL 24 | 0x01000000 |
| CHANNEL 25 | 0x02000000 |
| CHANNEL 26 | 0x04000000 |

ScanChannels 4

Specifies the scan type:

| Scan Type | Value |
|---------------|-------|
| ENERGY_DETECT | 0x00 |
| ACTIVE | 0x01 |
| PASSIVE | 0x02 |
| ORPHAN | 0x03 |

ScanType 1

ScanDuration 1 Duration of the scan - The exponent used in the scan duration calculation.
 ChannelPage 1 The channel page on which to perform the scan.
 KeySource 8 Key Source of this data frame.

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

SecurityLevel 1

Key Id Mode of this data frame:

| | | | |
|-----------|---|-------------------------------|--------------|
| KeyIdMode | 1 | Key Id Mode | Value |
| | | NOT_USED | 0x00 |
| | | KEY_1BYTE_INDEX | 0x01 |
| | | KEY_4BYTE_INDEX | 0x02 |
| | 1 | KEY_8BYTE_INDEX | 0x03 |
| | | Key Index of this data frame. | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x0C | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.12 MAC_ORPHAN_RSP

Description:

This command is sent by the host to response to the ORPHAN_IND.

Usage:

SREQ:

| | | | | | |
|---------------|-------------|-------------|---------|-------------------|------------------|
| Byte: 1 | 1 | 1 | 8 | 2 | 1 |
| Length = 0x0B | Cmd0 = 0x42 | Cmd1 = 0x51 | ExtAddr | AssocShortAddress | AssociatedMember |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| ExtAddr | 8 | Extended Address of the device sending the orphan notification |
| AssocShortAddress | 2 | Short address of the orphan device |
| AssociatedMember | 1 | TRUE if the orphan is a associated member. FALSE otherwise. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x51 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.13 MAC_POLL_REQ

Description:

This command is used to send a MAC data request poll.

Usage:

SREQ:

| | | | | | |
|---------------|---------------|-------------|------------------|--------------|------------|
| Byte: 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x16 | Cmd0 = 0x22 | Cmd1 = 0x0D | CoordAddressMode | CoordAddress | CoordPanId |
| 8 | 1 | 1 | 1 | | |
| KeySource | SecurityLevel | KeyIdMode | KeyIndex | | |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

| CoordAddressMode | 1 | | <table><tr><th>Mode</th><th>Value</th><th>Description</th></tr><tr><td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr><tr><td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr><tr><td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr><tr><td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr><tr><td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr></table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |

| KEY_8BYTE_INDEX | 0x03 | | | | | | | | | | | | | | | | | | | | |
| KeyIndex | 1 | Key Index of this data frame. | | | | | | | | | | | | | | | | | | | |

SRSP:

| Byte: 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|--------|
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x0D | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.1.14 MAC_PURGE_REQ**Description:**

This command is used to send a request to the device to purge a data frame

Usage:**SREQ:**

| Byte: 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|------------|
| Length = 0x01 | Cmd0 = 0x22 | Cmd1 = 0x0E | MsduHandle |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|-------------|
| MsduHandle | 1 | Msdu Handle |

SRSP:

| Byte: 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|--------|
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x0E | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Status 1 Status is either Success (0) or Failure (1).

3.5.1.15 MAC_SET_RX_GAIN_REQ

Description:

This command is used to send a request to the device to set Rx gain.

Usage:

SREQ:

| | | | |
|---------------|-------------|-------------|------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x22 | Cmd1 = 0x0F | Mode |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--------------------------|
| Mode | 1 | PA/PNA mode – TRUE/FALSE |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x62 | Cmd1 = 0x0F | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.5.2 MT_MAC Callbacks

3.5.2.1 MAC_SYNC_LOSS_IND

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) an indication of the synchronization loss.

Usage:

AREQ:

| | | | | | | |
|---------------|-------------|-------------|--------|-------|----------------|-------------|
| 1 | 1 | 1 | 1 | 2 | 1 | 1 |
| Length = 0x10 | Cmd0 = 0x42 | Cmd1 = 0x80 | Status | PanId | LogicalChannel | ChannelPage |

| | | | |
|-----------|---------------|-----------|----------|
| 8 | 1 | 1 | 1 |
| KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |
| PanId | 2 | PAN Id of the device |
| LogicalChannel | 1 | Logical Channel of the device where the synchronization is lost |
| ChannelPage | 1 | Channel Page of the device where the synchronization is lost |
| KeySource | 8 | Key Source of this data frame. |

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

SecurityLevel 1

Key Id Mode of this data frame:

| Key Id Mode | Value |
|-----------------|-------|
| NOT_USED | 0x00 |
| KEY_1BYTE_INDEX | 0x01 |
| KEY_4BYTE_INDEX | 0x02 |
| KEY_8BYTE_INDEX | 0x03 |

KeyIdMode 1

KeyIndex 1

Key Index of this data frame.

3.5.2.2 MAC_ASSOCIATE_IND

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) an association indication message.

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|-----------------------|--------------|
| 1 | 1 | 1 | 8 | 1 |
| Length = 0x14 | Cmd0 = 0x42 | Cmd1 = 0x81 | DeviceExtendedAddress | Capabilities |

| | | | |
|-----------|---------------|-----------|----------|
| 8 | 1 | 1 | 1 |
| KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description |
|-----------------------|---------------|---|
| DeviceExtendedAddress | 8 | Extended address of the device |
| Capabilities | 1 | Specifies the operating capabilities of the device being directly joined. Bit weighted values follow: Bit: 0 – Alternate PAN Coordinator 1 – Device type: 1- ZigBee Router; 0 – End Device 2 – Power Source: 1 Main powered 3 – Receiver on when Idle 4 – Reserved 5 – Reserved 6 – Security capability 7 – Reserved |
| KeySource | 8 | Key Source of this data frame. |

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

SecurityLevel 1

Key Id Mode of this data frame:

| Key Id Mode | Value |
|-----------------|-------|
| NOT_USED | 0x00 |
| KEY_1BYTE_INDEX | 0x01 |
| KEY_4BYTE_INDEX | 0x02 |
| KEY_8BYTE_INDEX | 0x03 |

KeyIdMode 1

KeyIndex 1

Key Index of this data frame.

3.5.2.3 MAC_ASSOCIATE_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) an association confirmation message.

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|--------|--------------------|
| 1 | 1 | 1 | 1 | 2 |
| Length = 0x0E | Cmd0 = 0x42 | Cmd1 = 0x82 | Status | DeviceShortAddress |

| | | | |
|-----------|---------------|-----------|----------|
| 8 | 1 | 1 | 1 |
| KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description |
|--------------------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |
| DeviceShortAddress | 2 | Short address of the device |
| KeySource | 8 | Key Source of this data frame. |

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

SecurityLevel 1

Key Id Mode of this data frame:

| KeyIdMode | 1 | <table><tr><th>Key Id Mode</th><th>Value</th></tr><tr><td>NOT_USED</td><td>0x00</td></tr><tr><td>KEY_1BYTE_INDEX</td><td>0x01</td></tr><tr><td>KEY_4BYTE_INDEX</td><td>0x02</td></tr><tr><td>KEY_8BYTE_INDEX</td><td>0x03</td></tr></table> | Key Id Mode | Value | NOT_USED | 0x00 | KEY_1BYTE_INDEX | 0x01 | KEY_4BYTE_INDEX | 0x02 | KEY_8BYTE_INDEX | 0x03 |
|-----------------|------|---|-------------|-------|----------|------|-----------------|------|-----------------|------|-----------------|------|
| | | Key Id Mode | Value | | | | | | | | | |
| | | NOT_USED | 0x00 | | | | | | | | | |
| | | KEY_1BYTE_INDEX | 0x01 | | | | | | | | | |
| | | KEY_4BYTE_INDEX | 0x02 | | | | | | | | | |
| KEY_8BYTE_INDEX | 0x03 | | | | | | | | | | | |
| KeyIndex | 1 | Key Index of this data frame. | | | | | | | | | | |

3.5.2.4 MAC_BEACON_NOTIFY_IND

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC beacon notify indication.

Usage:

AREQ:

| | | | | | |
|----------------------------|-------------|----------------|----------------|-----------|------------------------|
| 1 | 1 | 1 | 1 | 4 | 1 |
| Length = 0x24-0xBC | Cmd0 = 0x42 | Cmd1 = 0x83 | BSN | Timestamp | CoordinatorAddressMode |
| 8 | 2 | 2 | 1 | 1 | 1 |
| CoordinatorExtendedAddress | PanId | SuperframeSpec | LogicalChannel | GTSPermit | LinkQuality |
| 1 | 8 | 1 | 1 | 1 | 1 |
| SecurityFailure | KeySource | SecurityLevel | KeyIdMode | KeyIndex | PendingAddrSpec |
| 1 | 1 | 0-128 | | | |
| AddressList | SDULength | NSDU | | | |

Attributes:

| Attribute | Length (byte) | Description | | |
|----------------------------|---------------|-------------------------------------|-------|---------------------|
| BSN | 1 | BSN | | |
| Timestamp | 4 | Timestamp of the message | | |
| CoordinatorAddressMode | 1 | Address mode of the coordinator | | |
| | | Mode | Value | Description |
| | | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present |
| | | GROUP_ADDRESS | 0x01 | Group address |
| | | ADDRESS_16_BIT | 0x02 | Address 16 bit |

3.5.2.5 MAC_DATA_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC data confirmation.

Usage:

AREQ:

| | | | | | | |
|---------------|-------------|-------------|--------|--------|-----------|------------|
| 1 | 1 | 1 | 1 | 1 | 4 | 2 |
| Length = 0x08 | Cmd0 = 0x42 | Cmd1 = 0x84 | Status | Handle | Timestamp | Timestamp2 |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |
| Handle | 1 | Handle of the message |
| Timestamp | 4 | 64bit timestamp of the message |
| Timestamp2 | 2 | 16bit timestamp of the message |

3.5.2.6 MAC_DATA_IND

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC data indication.

Usage:

AREQ:

| | | | | | | |
|--------------------|-------------|-------------|-------------|---------|-------------|---------|
| 1 | 1 | 1 | 1 | 8 | 1 | 8 |
| Length = 0x2C-0xAC | Cmd0 = 0x42 | Cmd1 = 0x85 | SrcAddrMode | SrcAddr | DstAddrMode | DstAddr |

| | | | | | | | |
|-----------|------------|----------|----------|----------|-------------|-------------|------|
| 4 | 2 | 2 | 2 | 2 | 1 | 1 | 1 |
| Timestamp | Timestamp2 | SrcPanId | SrcPanId | DstPanId | LinkQuality | Correlation | RSSI |

3.5.2.8 MAC_DISASSOCIATE_CNF**Description:**

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC disassociate confirm.

Usage:**AREQ:**

| | | | | | | |
|---------------|-------------|-------------|--------|----------------|------------|-------------|
| 1 | 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x0C | Cmd0 = 0x42 | Cmd1 = 0x87 | Status | DeviceAddrMode | DeviceAddr | DevicePanId |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | |
|---------------------|---------------|--|------|-------|-------------|---------------------|------|---------------------|---------------|------|---------------|----------------|------|----------------|----------------|------|----------------|-----------|------|-----------|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). | | | | | | | | | | | | | | | | | | |
| DeviceAddrMode | 1 | Address mode of the device <table border="1"> <thead> <tr> <th>Mode</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr> <tr> <td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr> <tr> <td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr> <tr> <td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr> <tr> <td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr> </tbody> </table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |
| Mode | Value | Description | | | | | | | | | | | | | | | | | | |
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | | | | | | | | | | | | | | | | | | |
| GROUP_ADDRESS | 0x01 | Group address | | | | | | | | | | | | | | | | | | |
| ADDRESS_16_BIT | 0x02 | Address 16 bit | | | | | | | | | | | | | | | | | | |
| ADDRESS_64_BIT | 0x03 | Address 64 bit | | | | | | | | | | | | | | | | | | |
| BROADCAST | 0xFF | Broadcast | | | | | | | | | | | | | | | | | | |
| DeviceAddr | 8 | Address of the device | | | | | | | | | | | | | | | | | | |
| DevicePanId | 2 | Pan Id of the device | | | | | | | | | | | | | | | | | | |

3.5.2.9 MAC_ORPHAN_IND

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC orphan indication.

Usage:
AREQ:

| | | | |
|---------------|-------------|-------------|--------------|
| 1 | 1 | 1 | 8 |
| Length = 0x13 | Cmd0 = 0x42 | Cmd1 = 0x8A | ExtendedAddr |

| | | | |
|-----------|---------------|-----------|----------|
| 8 | 1 | 1 | 1 |
| KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description |
|--------------|---------------|---------------------------------------|
| ExtendedAddr | 8 | Extended address of the orphan device |
| KeySource | 8 | Key Source of this data frame. |

Security Level of this data frame:

SecurityLevel

1

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

Key Id Mode of this data frame:

KeyIdMode

1

| Key Id Mode | Value |
|-----------------|-------|
| NOT_USED | 0x00 |
| KEY_1BYTE_INDEX | 0x01 |
| KEY_4BYTE_INDEX | 0x02 |
| KEY_8BYTE_INDEX | 0x03 |

KeyIndex

1

Key Index of this data frame.

3.5.2.10 MAC_POLL_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC poll confirmation.

Usage:
AREQ:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x42 | Cmd1 = 0x8B | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.5.2.11 MAC_SCAN_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC scan confirmation.

Usage:
AREQ:

| | | | | | | |
|----------------------|-----------------|---------------------|------------|----|----------|-------------|
| 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| Length = 0x0A-0x8A | Cmd0 = 0x42 | Cmd1 = 0x8C | Status | ED | ScanType | ChannelPage |
| 4 | 1 | 1 | 0-128 | | | |
| UnscannedChannelList | ResultListCount | ResultListMaxLength | ResultList | | | |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | |
|--------------------------|---------------|--|-----------|-------|---------------|------|--------|------|---------|------|--------|------|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). ED max energy. | | | | | | | | | | |
| ED | 1 | | | | | | | | | | | |
| Specifies the scan type: | | | | | | | | | | | | |
| ScanType | 1 | <table><tr><th>Scan Type</th><th>Value</th></tr><tr><td>ENERGY_DETECT</td><td>0x00</td></tr><tr><td>ACTIVE</td><td>0x01</td></tr><tr><td>PASSIVE</td><td>0x02</td></tr><tr><td>ORPHAN</td><td>0x03</td></tr></table> | Scan Type | Value | ENERGY_DETECT | 0x00 | ACTIVE | 0x01 | PASSIVE | 0x02 | ORPHAN | 0x03 |
| | | Scan Type | Value | | | | | | | | | |
| | | ENERGY_DETECT | 0x00 | | | | | | | | | |
| | | ACTIVE | 0x01 | | | | | | | | | |
| | | PASSIVE | 0x02 | | | | | | | | | |
| ORPHAN | 0x03 | | | | | | | | | | | |
| ChannelPage | 1 | Channel Page | | | | | | | | | | |
| UnscannedChannelList | 4 | List of un-scanned channels | | | | | | | | | | |
| ResultListCount | 1 | Number of item in the result list | | | | | | | | | | |
| ResultListMaxLength | 1 | Max length of the result list in bytes | | | | | | | | | | |
| ResultList | 0-128 | Result list | | | | | | | | | | |

3.5.2.12 MAC_COMM_STATUS_IND

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC communication indicator.

Usage:
AREQ:

| | | | | | | |
|---------------|-------------|-------------|-----------|---------------|-------------|----------|
| 1 | 1 | 1 | 1 | 8 | 1 | 8 |
| Length = 0x24 | Cmd0 = 0x42 | Cmd1 = 0x8D | Status | SrcAddr | DstAddrMode | DstAddr |
| 4 | 2 | 1 | 8 | 1 | 1 | 1 |
| Timestamp | DevicePanId | Reason | KeySource | SecurityLevel | KeyIdMode | KeyIndex |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | |
|-------------|---------------|---|-------|---------------------|-------------|---------------------|------|---------------------|---------------|------|---------------|----------------|------|----------------|----------------|------|----------------|-----------|------|-----------|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). | | | | | | | | | | | | | | | | | | |
| DstAddrMode | 1 | Destination address mode | | | | | | | | | | | | | | | | | | |
| | | <table><tr><th>Mode</th><th>Value</th><th>Description</th></tr><tr><td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr><tr><td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr><tr><td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr><tr><td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr><tr><td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr></table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |
| | | Mode | Value | Description | | | | | | | | | | | | | | | | |
| | | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | | | | | | | | | | | | | | | | |
| | | GROUP_ADDRESS | 0x01 | Group address | | | | | | | | | | | | | | | | |
| | | ADDRESS_16_BIT | 0x02 | Address 16 bit | | | | | | | | | | | | | | | | |
| | | ADDRESS_64_BIT | 0x03 | Address 64 bit | | | | | | | | | | | | | | | | |
| BROADCAST | 0xFF | Broadcast | | | | | | | | | | | | | | | | | | |
| SrcAddr | 8 | Source address | | | | | | | | | | | | | | | | | | |
| DstAddr | 8 | Destination address | | | | | | | | | | | | | | | | | | |

| | | |
|-------------|---|---|
| Timestamp | 4 | Timestamp of the message |
| DevicePanId | 2 | Pan Id of the device that generate the indication |
| Reason | 1 | Reason for this communication indication. |
| KeySource | 8 | Key Source of this data frame. |

Security Level of this data frame:

| Security Level | Value |
|------------------------|-------|
| NO_SECURITY | 0x00 |
| MIC_32_AUTH | 0x01 |
| MIC_64_AUTH | 0x02 |
| MIC_128_AUTH | 0x03 |
| AES_ENCRYPTION | 0x04 |
| AES_ENCRYPTION_MIC_32 | 0x05 |
| AES_ENCRYPTION_MIC_64 | 0x06 |
| AES_ENCRYPTION_MIC_128 | 0x07 |

SecurityLevel 1

Key Id Mode of this data frame:

| KEY_1BYTE_INDEX | 0x01 |
| KEY_4BYTE_INDEX | 0x02 |
| KEY_8BYTE_INDEX | 0x03 |

KeyIdMode 1

KeyIndex 1 Key Index of this data frame.

3.5.2.13 MAC_START_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC start confirmation.

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x42 | Cmd1 = 0x8E | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.5.2.14 MAC_RX_ENABLE_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC Rx enable confirmation.

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x42 | Cmd1 = 0x8F | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.5.2.15 MAC_PURGE_CNF

Description:

This callback is called by the MAC to send (on behalf of the next higher layer) a MAC purge confirmation.

Usage:
AREQ:

| | | | | |
|---------------|-------------|-------------|--------|--------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x42 | Cmd1 = 0x9A | Status | Handle |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |
| Handle | 1 | Handle of this message |

3.6 MT_NWK

Not supported.

3.7 MT_SAPI

This interface allows tester to interact with the simple API interface.

3.7.1 MT_SAPI Commands

3.7.1.1 ZB_SYSTEM_RESET

Description:

This command will reset the device by using a soft reset (i.e. a jump to the reset vector) vice a hardware reset (i.e. watchdog reset.) This is especially useful in the CC2531, for instance, so that the USB host does not have to contend with the USB H/W resetting (and thus causing the USB host to re-enumerate the device which can cause an open virtual serial port to hang.)

Usage:
AREQ:

| | | |
|---------------|-------------|-------------|
| Byte: 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x46 | Cmd1 = 0x09 |

Attributes:

None

3.7.1.2 ZB_START_REQUEST

Description:

This command starts the ZigBee stack. When the ZigBee stack starts, the device reads configuration parameters from nonvolatile memory and the device joins its network. The ZigBee stack calls the zb_StartConfirm callback function when the startup process completes. After the start request process completes, the device is ready to send, receive, and route network traffic.

Usage:**SREQ:**

| | | |
|---------------|-------------|-------------|
| Byte: 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x26 | Cmd1 = 0x00 |

Attributes:

None

SRSP:

| | | |
|---------------|-------------|-------------|
| Byte: 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x66 | Cmd1 = 0x00 |

Attributes:

None

3.7.1.3 ZB_PERMIT_JOINING_REQUEST**Description:**

This command is used to control the joining permissions and thus allows or disallows new devices from joining the network.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|-------------|---------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x26 | Cmd1 = 0x08 | Destination | Timeout |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| Destination | 2 | The destination parameter indicates the address of the device for which the joining permissions should be set. This is usually the local device address or the special broadcast address that denotes all routers and coordinator (0xFFFC). This way the joining permissions of a single device or the whole network can be controlled. |
| Timeout | 1 | Indicates the amount of time in seconds for which the joining permissions should be turned on. If timeout is set to 0x00, the device will turn off the joining permissions indefinitely. If it is set to 0xFF, the joining permissions will be turned on indefinitely. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x66 | Cmd1 = 0x08 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.7.1.4 ZB_BIND_DEVICE**Description:**

This command establishes or removes a 'binding' between two devices. Once bound, an application can send messages to a device by referencing the commandId for the binding.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|--------|-----------|-------------|
| 1 | 1 | 1 | 1 | 2 | 8 |
| Length = 0x0B | Cmd0 = 0x26 | Cmd1 = 0x01 | Create | CommandId | Destination |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| Create | 1 | TRUE to create a binding, FALSE to remove a binding. |
| CommandId | 2 | The Identifier of the binding |
| Destination | 8 | Specifies the 64-bit IEEE address of the device to bind to. |

SRSP:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x66 | Cmd1 = 0x01 |

Attributes:

None

3.7.1.5 ZB_ALLOW_BIND**Description:**

This command puts the device into the Allow Binding Mode for a given period of time. A peer device can establish a binding to a device in the Allow Binding Mode by calling `zb_BindDevice` with a destination address of NULL.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x26 | Cmd1 = 0x02 | Timeout |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Timeout | 1 | The number of seconds to remain in the allow binding mode. Valid values range from 1 through 65. If 0, the Allow Bind mode will be set false without timeout. If greater than 64, the Allow Bind mode will be true. |

SRSP:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x66 | Cmd1 = 0x02 |

Attributes:

None

3.7.1.6 ZB_SEND_DATA_REQUEST**Description:**

This command initiates transmission of data to a peer device.

Usage:**SREQ:**

| | | | | | |
|--------------------|-------------|-------------|-------------|-----------|--------|
| Byte: 1 | 1 | 1 | 2 | 2 | 1 |
| Length = 0x08-0x5C | Cmd0 = 0x26 | Cmd1 = 0x03 | Destination | CommandId | Handle |

| | | | |
|-----|--------|-----|------|
| 1 | 1 | 1 | 0-84 |
| Ack | Radius | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|--|
| Destination | 2 | The destination of the data. The destination can be one of the following: - 16-Bit short address of device [0-0xffffD] - ZB_BROADCAST_ADDR sends the data to all devices in the network. - ZB_BINDING_ADDR sends the data to a previously bound device. |

| | | |
|-----------|------|--|
| CommandId | 2 | The command Id to send with the message. If the ZB_BINDING_ADDR destination is used, this parameter also indicates the binding to use. |
| Handle | 1 | A handle used to Identify the send data request. |
| Ack | 1 | TRUE if requesting acknowledgement from the destination. |
| Radius | 1 | The max number of hops the packet can travel through before it is dropped. |
| Len | 1 | Specifies the size of the Data buffer in bytes. |
| Data | 0-84 | Data |

SRSP:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x66 | Cmd1 = 0x03 |

Attributes:

None

3.7.1.7 ZB_READ_CONFIGURATION**Description:**

This command is used to get a configuration property from nonvolatile memory.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|----------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x26 | Cmd1 = 0x04 | ConfigId |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| ConfigId | 1 | Specifies the Identifier for the configuration property. |

SRSP:

| | | | | | | |
|--------------------|-------------|-------------|--------|----------|-----|-------|
| Byte: 1 | 1 | 1 | 1 | 1 | 1 | 0-128 |
| Length = 0x03-0x83 | Cmd0 = 0x66 | Cmd1 = 0x04 | Status | ConfigId | Len | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |
| ConfigId | 1 | Specifies the Identifier for the configuration property. |
| Len | 1 | Specifies the size of the Value buffer in bytes. |
| Value | 0-128 | buffer to hold the configuration property. |

3.7.1.8 ZB_WRITE_CONFIGURATION**Description:**

This command is used to write a Configuration Property to nonvolatile memory.

Usage:**SREQ:**

| | | | | | |
|--------------------|-------------|-------------|----------|-----|-------|
| Byte: 1 | 1 | 1 | 1 | 1 | 1-128 |
| Length = 0x03-0x83 | Cmd0 = 0x26 | Cmd1 = 0x05 | ConfigId | Len | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| ConfigId | 1 | The Identifier for the configuration property |
| Len | 1 | Specifies the size of the Value buffer in bytes. |
| Value | 1-128 | The buffer containing the new value of the configuration property. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x66 | Cmd1 = 0x05 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.7.1.9 ZB_GET_DEVICE_INFO**Description:**

This command retrieves a Device Information Property.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|-------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x26 | Cmd1 = 0x06 | Param |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Param | 1 | The Identifier for the device information. |

SRSP:

| | | | | |
|---------------|-------------|-------------|-------|-------|
| 1 | 1 | 1 | 1 | 8 |
| Length = 0x09 | Cmd0 = 0x66 | Cmd1 = 0x06 | Param | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Param | 1 | The Identifier for the device information. |
| Value | 2 | A buffer to hold the device information |

3.7.1.10 ZB_FIND_DEVICE_REQUEST**Description:**

This command is used to determine the short address for a device in the network. The device initiating a call to `zb_FindDeviceRequest` and the device being discovered must both be a member of the same network. When the search is complete, the `zv_FindDeviceConfirm` callback function is called.

SREQ:

| | | | |
|---------------|-------------|-------------|-----------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x26 | Cmd1 = 0x07 | SearchKey |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-----------------------------------|
| SearchKey | 8 | Specifies the value to search on. |

SRSP:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x66 | Cmd1 = 0x07 |

Attributes:

None

3.7.2 MT_SAPI Callbacks

3.7.2.1 ZB_START_CONFIRM

Description:

This callback is called by the ZigBee stack after a start request operation completes.

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x46 | Cmd1 = 0x80 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.7.2.2 ZB_BIND_CONFIRM

Description:

This callback is called by the ZigBee stack after a bind operation completes.

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|-----------|--------|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x46 | Cmd1 = 0x81 | CommandId | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| CommandId | 2 | The command Id of the binding being confirmed. |
| Status | 1 | Specifies the status of the bind operation. |

3.7.2.3 ZB_ALLOW_BIND_CONFIRM

Description:

This callback indicates another device attempted to bind to this device.

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x46 | Cmd1 = 0x82 | Source |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Source | 2 | Contains the address of the device attempted to bind to this device. |

3.7.2.4 ZB_SEND_DATA_CONFIRM

Description:

This callback indicates the data has been sent.

Usage:
AREQ:

| | | | | |
|---------------|-------------|-------------|--------|--------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x02 | Cmd0 = 0x46 | Cmd1 = 0x83 | Handle | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Handle | 1 | Specifies the handle. |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.7.2.5 ZB_RECEIVE_DATA_INDICATION

Description:

This callback is called asynchronously by the ZigBee stack to notify the application when data is received from a peer device.

Usage:
AREQ:

| | | | | | | |
|------------------|-------------|-------------|--------|---------|-----|------|
| 1 | 1 | 1 | 2 | 2 | 2 | 0-84 |
| Length = 0x06-5A | Cmd0 = 0x46 | Cmd1 = 0x87 | Source | Command | Len | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Source | 2 | Specifies the short address of the peer device that sent the data. |
| Command | 2 | The command Id associated with the data. |
| Len | 2 | Specifies the number of bytes in the Data parameter. |
| Data | 0-84 | The data sent by the peer device. |

3.7.2.6 ZB_FIND_DEVICE_CONFIRM

Description:

This callback is called by the ZigBee stack when a find device operation completes.

Usage:
AREQ:

| | | | | | |
|---------------|-------------|-------------|-------------------|-----------|--------|
| 1 | 1 | 1 | 1 | 2 | 8 |
| Length = 0x0B | Cmd0 = 0x46 | Cmd1 = 0x85 | SearchType = 0x01 | SearchKey | Result |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--|
| SearchType | 1 | The type of search that was performed. |
| SearchKey | 2 | Value that the search was executed on. |
| Result | 8 | The result of the search. |

3.8 MT_SYS

This interface allows the tester to interact with the target at system level such as reset, read/write memory, read/write extended address...etc.

3.8.1 MT_SYS Commands

3.8.1.1 SYS_RESET_REQ

Description:

This command is sent by the tester to reset the target device

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x41 | Cmd1 = 0x00 | Type |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Type | 1 | This command will reset the device by using a hardware reset (i.e. watchdog reset) if 'Type' is zero. Otherwise a soft reset (i.e. a jump to the reset vector) vice is effected. This is especially useful in the CC2531, for instance, so that the USB host does not have to contend with the USB H/W resetting (and thus causing the USB host to re-enumerate the device which can cause an open virtual serial port to hang.) |

3.8.1.2 SYS_PING

Description:

This command issues PING requests to verify if a device is active and check the capability of the device.

Usage:

SREQ:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x21 | Cmd1 = 0x01 |

Attributes:

None

SRSP:

| | | | |
|---------------|-------------|-------------|--------------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x61 | Cmd1 = 0x01 | Capabilities |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

This field represents the interfaces that this device can handle (compiled into the device). Bit weighted and defined as:

| Capabilities | 2 | Capability | Value |
|--------------|---|--------------|--------|
| | | MT_CAP_SYS | 0x0001 |
| | | MT_CAP_MAC | 0x0002 |
| | | MT_CAP_NWK | 0x0004 |
| | | MT_CAP_AF | 0x0008 |
| | | MT_CAP_ZDO | 0x0010 |
| | | MT_CAP_SAPI | 0x0020 |
| | | MT_CAP_UTIL | 0x0040 |
| | | MT_CAP_DEBUG | 0x0080 |
| | | MT_CAP_APP | 0x0100 |
| | | MT_CAP_ZOAD | 0x1000 |

3.8.1.3 SYS_VERSION

Description:

This command is used to request for the device's version string.

Usage:

SREQ:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x21 | Cmd1 = 0x02 |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Type | 1 | Requests a target device reset (0) or serial boot loader reset (1). If the target device does not support serial boot loading, boot loader reset commands are ignored and no response is sent from the target. |

SRSP:

| | | | | | | | |
|---------------|-------------|-------------|--------------|---------|----------|----------|----------|
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| Length = 0x05 | Cmd0 = 0x61 | Cmd1 = 0x02 | TransportRev | Product | MajorRel | MinorRel | MaintRel |

Attributes:

| Attribute | Length (byte) | Description |
|--------------|---------------|-------------------------------------|
| TransportRev | 1 | Transport protocol revision |
| Product | 1 | Product Id |
| MajorRel | 1 | Software major release number |
| MinorRel | 1 | Software minor release number |
| MaintRel | 1 | Software maintenance release number |

3.8.1.4 SYS_SET_EXTADDR

Description:

This command is used to set the extended address of the device.

Usage:

SREQ:

| | | | |
|---------------|-------------|-------------|------------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x21 | Cmd1 = 0x03 | ExtAddress |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

ExtAddress 8 The device's extended address.

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x03 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | Status is either Success (1) or Failure (0) |

3.8.1.5 SYS_GET_EXTADDR**Description:**

This command is used to get the extended address of the device.

Usage:**SREQ:**

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x21 | Cmd1 = 0x04 |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | Status is either Success (1) or Failure (0) |

SRSP:

| | | | |
|---------------|-------------|-------------|------------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x61 | Cmd1 = 0x04 | ExtAddress |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--------------------------------|
| ExtAddress | 8 | The device's extended address. |

3.8.1.6 SYS_RAM_READ**Description:**

This command is used by the tester to read a single memory location in the target RAM. The command accepts an address value and returns the memory value present in the target RAM at that address.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|-----|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x21 | Cmd1 = 0x05 | Address | Len |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Address | 2 | Address of the memory that will be read. |
| Len | 1 | The number of bytes that will be read from the target RAM. |

SRSP:

| | | | | | |
|--------------------|-------------|-------------|--------|-----|-------|
| 1 | 1 | 1 | 1 | 1 | 0-128 |
| Length = 0x02-0x82 | Cmd0 = 0x61 | Cmd1 = 0x05 | Status | Len | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

| | | |
|--------|-------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |
| Len | 1 | The number of bytes that will be read from the target RAM. |
| Value | 0-128 | The value read from the target RAM. |

3.8.1.7 SYS_RAM_WRITE

Description:

This command is used by the tester to write to a particular location in the target RAM. The command accepts an address location and a memory value. The memory value is written to the address location in the target RAM.

Usage:

SREQ:

| | | | | | |
|--------------------|-------------|-------------|---------|-----|-------|
| 1 | 1 | 1 | 2 | 1 | 1-128 |
| Length = 0x04-0x84 | Cmd0 = 0x21 | Cmd1 = 0x06 | Address | Len | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Address | 2 | Address of the memory that will be read. |
| Len | 1 | The number of bytes that will be read from the target RAM. |
| Value | 1-128 | The value written to the target RAMS. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x06 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.8.1.8 SYS_OSAL_NV_READ

Description:

This command is used by the tester to read a single memory item in the target non-volatile memory. The command accepts an attribute Id value and returns the memory value present in the target for the specified attribute Id.

Usage:

SREQ:

| | | | | |
|---------------|-------------|-------------|----|--------|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x21 | Cmd1 = 0x08 | Id | Offset |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Id | 2 | The Id of the NV item. |
| Offset | 1 | Number of bytes offset from the beginning or the NV value. |

SRSP:

| | | | | | |
|--------------------|-------------|-------------|--------|-----|-------|
| 1 | 1 | 1 | 1 | 1 | 0-128 |
| Length = 0x02-0x82 | Cmd0 = 0x61 | Cmd1 = 0x08 | Status | Len | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |
| Len | 1 | Length of the NV value. |

Value 0-128 Value of the NV item.

3.8.1.9 SYS_OSAL_NV_WRITE

Description:

This command is used by the tester to write to a particular item in non-volatile memory. The command accepts an attribute Id and an attribute value. The attribute value is written to the location specified for the attribute Id in the target.

Usage:

SREQ:

| | | | | | | |
|--------------------|-------------|-------------|----|--------|-----|-------|
| 1 | 1 | 1 | 2 | 1 | 1 | 1-128 |
| Length = 0x04-0x84 | Cmd0 = 0x21 | Cmd1 = 0x09 | Id | Offset | Len | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Id | 2 | The Id of the NV item. |
| Offset | 1 | Number of bytes offset from the beginning or the NV value. |
| Len | 1 | Length of the NV value. |
| Value | 0-128 | Value of the NV item. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x09 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.8.1.10 SYS_OSAL_START_TIMER

Description

This command is used by the tester to start a timer event. The event will expired after the indicated amount of time and a notification will be sent back to the tester.

Usage

SREQ:

| | | | | |
|---------------|-------------|-------------|----|---------|
| 1 | 1 | 1 | 1 | 2 |
| Length = 0x03 | Cmd0 = 0x21 | Cmd1 = 0x0A | Id | Timeout |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Id | 1 | The Id of the timer event (0-3) |
| Timeout | 2 | Amount of time it will take before the event expired in milliseconds. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x0A | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.8.1.11 SYS_OSAL_STOP_TIMER

Description:

This command is used by the tester to stop a timer event.

Usage:
SREQ:

| | | | |
|---------------|-------------|-------------|----|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x21 | Cmd1 = 0x0B | Id |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|----------------------------------|
| Id | 1 | The Id of the timer event (0-3). |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x0B | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.8.1.12 SYS_RANDOM

Description:

This command is used by the tester to get a random 16-bit number.

Usage:
SREQ:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x21 | Cmd1 = 0x0C |

Attributes:

None

SRSP:

| | | | |
|---------------|-------------|-------------|-------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x61 | Cmd1 = 0x0C | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------------|
| Value | 2 | The random value. |

3.8.1.13 SYS_ADC_READ

Description

This command is used by the tester to read a value from the ADC based on specified channel and resolution.

Usage
SREQ:

| | | | | |
|---------------|-------------|-------------|---------|------------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x02 | Cmd0 = 0x21 | Cmd1 = 0x0D | Channel | Resolution |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

The channel of the ADC that will be used.

Channel 1

| Channel | Value |
|--------------------|-------|
| AIN0 | 0x00 |
| AIN1 | 0x01 |
| AIN2 | 0x02 |
| AIN3 | 0x03 |
| AIN4 | 0x04 |
| AIN5 | 0x05 |
| AIN6 | 0x06 |
| AIN7 | 0x07 |
| Temperature Sensor | 0x0E |
| Voltage Reading | 0x0F |

Resolution of the reading. This can be 8-bit, 10-bit, 12-bit or 14-bit.

Resolution 1

| Resolution | Value |
|------------|-------|
| 8-bit | 0x00 |
| 10-bit | 0x01 |
| 12-bit | 0x02 |
| 14-bit | 0x03 |

SRSP:

| | | | |
|---------------|-------------|-------------|-------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x61 | Cmd1 = 0x0D | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Value | 2 | Value of the ADC reading based on the specified information. |

3.8.1.14 SYS_GPIO**Description**

This command is used by the tester to control the 4 GPIO pins on the CC2530-ZNP build.

Usage**SREQ:**

| | | | | |
|---------------|-------------|-------------|-----------|-------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x02 | Cmd0 = 0x21 | Cmd1 = 0x0E | Operation | Value |

Operation – 1 byte – specifies the type of operation to perform on the GPIO pins. It can take the values, shown in the table below, with effects dictated by the bit values of the value parameter:

Attributes:

| Operation | Description |
|-------------------------|--|
| Set direction (0x00) | Configure the direction of the GPIO pins. A value of 0 in a bit position configures the corresponding GPIO pin as an Input while a value of 1 configures it as Output. |
| Set Input mode (0x01) | Configure the Input mode of the GPIO pins. A value of 0 in a bit position configures it as pull-up mode while a 1 configures it in tri-state Input mode. (<i>Note: P1_0 and P1_1 of the CC2530 can only be set in tri-state input mode</i>). |
| Set (0x02) | A value of 1 in a bit position will set the corresponding GPIO pin (writes a 1). |
| Clear (0x03) | A value of 0 in a bit position will clear the corresponding GPIO pin (writes a 0). |
| Toggle (0x04) | A value of 1 in a bit position will toggle the corresponding GPIO pin. |
| Read (0x05) | Reads the GPIO pins. |

SRSP:

| 1 | 1 | 1 | 2 |
|---------------|-------------|-------------|-------|
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x0E | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|------------------------------------|
| Value | 1 | The value read from the GPIO pins. |

3.8.1.15 SYS_STACK_TUNE**Description**

This command is used by the tester to tune intricate or arcane settings at runtime.

Usage**SREQ:**

| 1 | 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|-----------|-------|
| Length = 0x02 | Cmd0 = 0x21 | Cmd1 = 0x0F | Operation | Value |

Attributes:

The tuning operation to be executed according to the STK_Tune_t enumeration:

| Operation | Value |
|--|-------|
| Set the transmitter power level according to the value of the Value parameter which should correspond to the valid values specified by the ZMacTransmitPower_t enumeration (0xFD – 0x16) | 0x00 |
| Set RxOnWhenIdle off/on if the value of Value is 0/1; otherwise return the current setting of RxOnWhenIdle. | 0x01 |

SRSP:

| 1 | 1 | 1 | 2 |
|---------------|-------------|-------------|-------|
| Length = 0x01 | Cmd0 = 0x61 | Cmd1 = 0x0F | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Value | 1 | Applicable status of the tuning operation. |

3.8.2 MT_SYS Callbacks**3.8.2.1 SYS_RESET_IND****Description**

This command is sent by the device to indicate the reset

Usage**AREQ:**

| 1 | 1 | 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|--------|--------------|-----------|
| Length = 0x06 | Cmd0 = 0x41 | Cmd1 = 0x80 | Reason | TransportRev | ProductId |

| 1 | 1 | 1 |
|----------|----------|-------|
| MajorRel | MinorRel | HwRev |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Reason for the reset.

| | | | | |
|--------------|---|------------------------------|-------------------|--------------|
| Reason | 1 | | Resolution | Value |
| | | | Power-up | 0x00 |
| | | | External | 0x01 |
| | | | Watch-dog | 0x02 |
| TransportRev | 1 | Transport protocol revision. | | |
| Product | 1 | Major release number. | | |
| MinorRel | 1 | Minor release number. | | |
| HwRev | 1 | Hardware revision number. | | |

3.8.2.2 SYS_OSAL_TIMER_EXPIRED

Description:

This command is sent by the device to indicate a specific time has been expired.

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|----|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x41 | Cmd1 = 0x81 | Id |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---------------------------------|
| Id | 1 | The Id of the timer event (0-3) |

3.9 MT_UART

This interface handles communication between the target and Z-Tool. Tester has no direct control over this interface. There is no direct command for the tester to interact with this interface.

3.10 MT_UTIL

This interface provides tester supporting functionalities such as setting PanId, getting device info, getting NV info, subscribing callbacks...etc.

3.10.1 MT_UTIL Commands

3.10.1.1 UTIL_GET_DEVICE_INFO

Description:

This command is sent by the tester to retrieve the device info.

Usage:

SREQ:

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x27 | Cmd1 = 0x00 |

Attributes:

None

SRSP:

| | | | | | | |
|---|---|---|---|---|---|---|
| 1 | 1 | 1 | 1 | 8 | 2 | 1 |
|---|---|---|---|---|---|---|

| | | | | | | |
|---------------|-------------|-------------|--------|----------|-----------|------------|
| Length = 0x02 | Cmd0 = 0x67 | Cmd1 = 0x00 | Status | IEEEAddr | ShortAddr | DeviceType |
|---------------|-------------|-------------|--------|----------|-----------|------------|

| | | |
|-------------|-----------------|-----------------|
| 1 | 1 | 0-128 |
| DeviceState | NumAssocDevices | AssocDeviceList |

Attributes:

| Attribute | Length (byte) | Description |
|------------------|---------------|--|
| Status | 1 | Status is a one byte field and is either success(0) or fail(1). The fail status is returned if the address value in the command message was not within the valid range. |
| IEEEAddr | 8 | IEEE address of the device |
| ShortAddr | 2 | Short address of the device |
| DeviceType | 1 | Indicates device type, where bits 0 to 2 indicate the capability for the device to operate as a coordinator, router, or end device, respectively. Indicates the state of the device with different possible states as shown below: |
| DeviceState | 1 | 0x00: Initialized - not started automatically 0x01: Initialized - not connected to anything 0x02: Discovering PAN's to join 0x03: Joining a PAN 0x04: Rejoining a PAN, only for end devices 0x05: Joined but not yet authenticated by trust center 0x06: Started as device after authentication 0x07: Device joined, authenticated and is a router 0x08: Starting as ZigBee Coordinator 0x09: Started as ZigBee Coordinator 0x0A: Device has lost information about its parent |
| NumAssocDevices | 1 | Specifies the number of devices being associated to the target device. |
| AssocDevicesList | Array | Array of 16-bits specifies the network address associated with the device. |

3.10.1.2 UTIL_GET_NV_INFO**Description:**

This command is used by the tester to read a block of parameters from Non-Volatile storage of the target device.

Usage:**SREQ:**

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x27 | Cmd1 = 0x01 |

Attributes:

None

SRSP:

| | | | | | | |
|---------------|-------------|-------------|--------|----------|--------------|-------|
| 1 | 1 | 1 | 1 | 8 | 4 | 2 |
| Length = 0x20 | Cmd0 = 0x67 | Cmd1 = 0x01 | Status | IEEEAddr | ScanChannels | PanId |

| | |
|---------------|--------------|
| 1 | 16 |
| SecurityLevel | PreConfigKey |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | A value of zero indicates success. Failure is indicated by a non-zero value, representing a bit mask of each item that failed to be retrieved from NV memory. Bit0 is used for the first item (IEEEAddress), bit1 for the second item (ScanChannels), and so forth. Data values for failed items are returned as one or more bytes of 0xFF, the typical value read from erased NV memory. |

| | | |
|---------------|----|--|
| IEEEAddr | 8 | IEEE address of the device |
| ScanChannels | 4 | This represents a bit-mask of channels to be scanned when starting the device. |
| PanId | 2 | Specifies the Pan Id to start or join. Set to 0xFFFF to select a PAN after scanning. |
| SecurityLevel | 1 | This specifies the network messaging security level, zero disables security. |
| PreConfigKey | 16 | This specifies the pre-configured security key. |

3.10.1.3 UTIL_SET_PANID

Description:

Store a PanId value into Non-Volatile memory to be used the next time the target device resets.

Usage:

SREQ:

| | | | |
|---------------|-------------|-------------|-------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x27 | Cmd1 = 0x02 | PanId |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|------------------------|
| PanId | 2 | PanId that will be set |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x02 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.4 UTIL_SET_CHANNELS

Description:

This command is used to store a channel select bit-mask into Non-Volatile memory to be used the next time the target device resets.

Usage:

SREQ:

| | | | |
|---------------|-------------|-------------|----------|
| 1 | 1 | 1 | 4 |
| Length = 0x04 | Cmd0 = 0x27 | Cmd1 = 0x03 | Channels |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Channels | 4 | A bit-mask representing the channel(s) to scan the next time the target device resets. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x03 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.5 UTIL_SET_SECLEVEL

Description:

This command is used to store a security level value into Non-Volatile memory to be used the next time the target device resets.

Usage:
SREQ:

| | | | |
|---------------|-------------|-------------|----------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x27 | Cmd1 = 0x04 | SecLevel |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SecLevel | 1 | Security level to use the next time the target device resets. Zero is used to disable security. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x04 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.6 UTIL_SET_PRECFGKEY

Description:

This command is used to store a pre-configured key array into Non-Volatile memory to be used the next time the target device resets.

Usage:
SREQ:

| | | | |
|---------------|-------------|-------------|-----------|
| 1 | 1 | 1 | 16 |
| Length = 0x10 | Cmd0 = 0x27 | Cmd1 = 0x05 | PreCfgKey |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| PreCfgKey | 16 | An array representing the pre-configured key to use the next time the target device resets. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x05 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.7 UTIL_CALLBACK_SUB_CMD

Description:

This command subscribes/unsubscribes to layer callbacks. For particular subsystem callbacks to work, the software must be compiled with a special flag that is unique to that subsystem to enable

the callback mechanism. For example to enable ZDO callbacks, MT_ZDO_CB_FUNC flag must be compiled when the software is built. For complete list of callback compile flags, check section 1.2 or “**Z-Stack Compile Options**” document.

Usage:

SREQ:

| 1 | 1 | 1 | 2 | 1 |
|---------------|-------------|-------------|-------------|--------|
| Length = 0x03 | Cmd0 = 0x27 | Cmd1 = 0x06 | SubsystemId | Action |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Subsystem Id of the expected layer

SubsystemId

2

| Subsystem | Id |
|---------------|--------|
| MT_SYS | 0x0100 |
| MT_MAC | 0x0200 |
| MT_NWK | 0x0300 |
| MT_AF | 0x0400 |
| MT_ZDO | 0x0500 |
| MT_SAPI | 0x0600 |
| MT_UTIL | 0x0700 |
| MT_DEBUG | 0x0800 |
| MT_APP | 0x0900 |
| ALL SUBSYSTEM | 0xFFFF |

Action

1

0: Disable, 1: Enable

SRSP:

| 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|--------|
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x06 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Status

1

Status is either Success (0) or Failure (1).

3.10.1.8 UTIL_KEY_EVENT

Description:

Sends a key event to the device registered application. The device register application means that the application registered for key events with Onboard. Not all application support all keys, so you must know what keys the application supports

Usage:

SREQ:

| 1 | 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|-------|-----|
| Length = 0x02 | Cmd0 = 0x27 | Cmd1 = 0x07 | Shift | Key |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------|
|-----------|---------------|-------------|

Shift

1

0: No shift, 1: Shift

Key

1

Value of the key

SRSP:

| 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|--------|
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x07 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.9 UTIL_TIME_ALIVE**Description:**

This command is used by the tester to get the board's time alive.

Usage:**SREQ:**

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x27 | Cmd1 = 0x09 |

Attributes:

None

SRSP:

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 4 |
| Length = 0x04 | Cmd0 = 0x67 | Cmd1 = 0x09 | Seconds |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Seconds | 4 | The time of the board's live in seconds |

3.10.1.10 UTIL_LED_CONTROL**Description:**

This command is used by the tester to control the LEDs on the board.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|-------|------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x02 | Cmd0 = 0x27 | Cmd1 = 0x0A | LedId | Mode |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|----------------|
| Laded | 1 | The LED number |
| Mode | 1 | 0: OFF, 1: ON |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x0A | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.11 UTIL_LOOPBACK

Description:

This command is used by the tester to test data buffer loopback.

Usage:
SREQ:

| | | | |
|----------------------|-------------|-------------|---------|
| 1 | 1 | 1 | 0 - 250 |
| Length = 0x00 – 0xFA | Cmd0 = 0x27 | Cmd1 = 0x10 | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-----------------------------------|
| Data | 0 – 250 | The data bytes to be looped back. |

SRSP:

| | | | |
|----------------------|-------------|-------------|---------|
| 1 | 1 | 1 | 0 - 250 |
| Length = 0x00 – 0xFA | Cmd0 = 0x67 | Cmd1 = 0x10 | Data |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-----------------------------|
| Data | 0 – 250 | The looped back data bytes. |

3.10.1.12 UTIL_DATA_REQ

Description:

This command is used by the tester to effect a MAC MLME Poll Request.

Usage:
SREQ:

| | | | |
|---------------|-------------|-------------|-------------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x27 | Cmd1 = 0x11 | SecurityUse |

Attributes:

| Attribute | Length | Description |
|-------------|--------|---|
| SecurityUse | 1 | TRUE to request MAC security, but not used for now. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x11 | Status |

Attributes:

| Attribute | Length | Description |
|-----------|--------|--|
| Status | 1 | A MAC status value from ZComDef.h, but only ZMacSuccess for now. |

3.10.1.13 UTIL_SRC_MATCH_ENABLE

Description:

This command is used to enable AUTOPEND and source address matching.

Usage:
SREQ:

| | | | | |
|---------|---|---|---|---|
| Byte: 1 | 1 | 1 | 1 | 1 |
|---------|---|---|---|---|

Length = 0x02 Cmd0 = 0x27 Cmd1 = 0x20 AddrType NumEntries

Attributes:

| Attribute | Length (byte) | Description |
|--------------------------------|---------------|---|
| Address types used in AutoPend | | |
| AddrType | 1 | Auto Pend Address Type |
| | | Value |
| | | 0x02 |
| | | 0x03 |
| | | |
| NumEntries | 1 | Numbers of source address table entries to be used. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x20 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.14 UTIL_SRC_MATCH_ADD_ENTRY**Description:**

This command is used to add a short or extended address to the source address table.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|-------------|---------|
| Byte: 1 | 1 | 1 | 1 | 8 |
| Length = 0x0B | Cmd0 = 0x27 | Cmd1 = 0x21 | AddressMode | Address |

Attributes:

| Attribute | Length (byte) | Description | | |
|-------------|---------------|--|-------|----------------|
| AddressMode | 1 | Mode | Value | Description |
| | | ADDRESS_16_BIT | 0x02 | Address 16 bit |
| | | ADDRESS_64_BIT | 0x03 | Address 64 bit |
| Address | 8 | Address of the device that will be added - Can be short or extended depends on the address mode. | | |
| PanId | 2 | PAN Id of the device. Only use when the address is a short address. | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x21 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.15 UTIL_SRC_MATCH_DEL_ENTRY**Description:**

This command is used to delete a short or extended address from the source address table.

Usage:**SREQ:**

| | | | | | |
|---------|---|---|---|---|---|
| Byte: 1 | 1 | 1 | 1 | 8 | 2 |
|---------|---|---|---|---|---|

Length = 0x0B Cmd0 = 0x27 Cmd1 = 0x22 AddressMode Address PanId

Attributes:

| Attribute | Length (byte) | Description | | |
|-------------|---------------|--|-------|----------------|
| AddressMode | 1 | Mode | Value | Description |
| | | ADDRESS_16_BIT | 0x02 | Address 16 bit |
| | | ADDRESS_64_BIT | 0x03 | Address 64 bit |
| Address | 8 | Address of the device that will be deleted - Can be short or extended depends on the address mode. | | |
| PanId | 2 | PAN Id of the device. Only use when the address is a short address. | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x22 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.16 UTIL_SRC_MATCH_CHECK_SRC_ADDR**Description:**

This command is used to check if a short or extended address is in the source address table.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|-------------|---------|-------|
| Byte: 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x0B | Cmd0 = 0x27 | Cmd1 = 0x23 | AddressMode | Address | PanId |

Attributes:

| Attribute | Length (byte) | Description | | |
|-------------|---------------|--|-------|----------------|
| AddressMode | 1 | Mode | Value | Description |
| | | ADDRESS_16_BIT | 0x02 | Address 16 bit |
| | | ADDRESS_64_BIT | 0x03 | Address 64 bit |
| Address | 8 | Address of the device that will be checked - Can be short or extended depends on the address mode. | | |
| PanId | 2 | PAN Id of the device. Only use when the address is a short address. | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x23 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.17 UTIL_SRC_MATCH_ACK_ALL_PENDING**Description:**

This command is used to enable/disable acknowledging all packets with pending bit set.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x27 | Cmd1 = 0x24 | Option |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Option | 1 | TRUE - acknowledging all packets with pending field set. FALSE - Otherwise |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x24 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.10.1.18 UTIL_SRC_MATCH_CHECK_ALL_PENDING**Description:**

This command is used to check if acknowledging all packets with pending bit set is enabled.

Usage:**SREQ:**

| | | |
|---------------|-------------|-------------|
| Byte: 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x27 | Cmd1 = 0x25 |

Attributes:

None

SRSP:

| | | | | |
|---------------|-------------|-------------|--------|-------|
| Byte: 1 | 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x25 | Status | Value |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |
| Value | 1 | TRUE - acknowledging all packets with pending bit set is enabled. FALSE – otherwise. |

3.10.1.19 UTIL_ADDRMGR_EXT_ADDR_LOOKUP**Description:**

This command is a proxy call to the AddrMgrExtAddrLookup() function.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|---------|
| 1 | 1 | 1 | 8 | 2 |
| Length = 0x0A | Cmd0 = 0x27 | Cmd1 = 0x40 | ExtAddr | NwkAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| ExtAddr | 8 | Buffer to hold the extended address return value of the function. |
| NwkAddr | 2 | Network Address (LSB-MSB) of the device for which to lookup the Extended Address. |

SRSP:

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x67 | Cmd1 = 0x40 | ExtAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| ExtAddr | 8 | Extended Address (LSB-MSB) of the device that corresponds to the Network Address sent as a parameter in the request. |

3.10.1.20 UTIL_ADDRMGR_NWK_ADDR_LOOKUP**Description:**

This command is a proxy call to the AddrMgrEntryLookupNwk() function.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x27 | Cmd1 = 0x41 | NwkAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| NwkAddr | 2 | Network Address (LSB-MSB) of the device for which to lookup the Extended Address. |

SRSP:

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x67 | Cmd1 = 0x41 | ExtAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| ExtAddr | 8 | Extended Address (LSB-MSB) of the device that corresponds to the Network Address sent as a parameter in the request. |

3.10.1.21 UTIL_APSME_LINK_KEY_DATA_GET**Description:**

This command retrieves APS link key data, Tx and Rx frame counters.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x27 | Cmd1 = 0x44 | ExtAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| ExtAddr | 8 | The extended address for which to get the link key data. |

SRSP:

| | | | | | | |
|---------------|-------------|-------------|--------|--------|-----------|-----------|
| 1 | 1 | 1 | 1 | 16 | 4 | 4 |
| Length = 0x19 | Cmd0 = 0x67 | Cmd1 = 0x44 | Status | SecKey | TxFrmCntr | RxFrmCntr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | The ZStatus_t returned by the proxy call to APSME_LinkKeyNVIDGet(). |
| SecKey | 16 | On success, the security key looked up; otherwise N/A. |
| TxFrmCntr | 4 | On success, the TX frame counter; otherwise N/A. |
| RxFrmCntr | 4 | On success, the RX frame counter, otherwise N/A. |

3.10.1.22 UTIL_APSME_LINK_KEY_NV_ID_GET

Description:

This command is a proxy call to the APSME_LinkKeyNvIdGet() function.

Usage:
SREQ:

| | | | |
|---------------|-------------|-------------|---------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x27 | Cmd1 = 0x45 | ExtAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| ExtAddr | 8 | The extended address for which to get the link key NV Id. |

SRSP:

| | | | | |
|---------------|-------------|-------------|--------|-------------|
| 1 | 1 | 1 | 1 | 2 |
| Length = 0x03 | Cmd0 = 0x67 | Cmd1 = 0x45 | Status | LinkKeyNvId |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| Status | 1 | Status of proxy call to APSME_LinkKeyNvIdGet(). |
| LinkKeyNvId | 2 | On success, link key NV ID. Otherwise 0xFFFF |

3.10.1.23 UTIL_ASSOC_COUNT

Description:

This command is a proxy call to the AssocCount() function.

Usage:
SREQ:

| | | | | |
|---------------|-------------|-------------|---------------|-------------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x02 | Cmd0 = 0x27 | Cmd1 = 0x48 | StartRelation | EndRelation |

Attributes:

| Attribute | Length (byte) | Description |
|---------------|---------------|---|
| StartRelation | 1 | A valid node relation from AssocList.h: |
| | | // Node Relations |
| | | #define PARENT 0 |
| | | #define CHILD_RFD 1 |
| | | #define CHILD_RFD_RX_IDLE 2 |
| | | #define CHILD_FFD 3 |
| | | #define CHILD_FFD_RX_IDLE 4 |
| EndRelation | 1 | #define NEIGHBOR 5 |
| | | #define OTHER 6 |
| | | The node relation at which to start counting. |
| EndRelation | 1 | Same as StartRelation, but the node relation at which to stop counting. |

SRSP:

| | | | |
|---------------|-------------|-------------|-------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x67 | Cmd1 = 0x48 | Count |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Count | 2 | The count returned by the proxy call to AssocCount(). |

3.10.1.24 UTIL_ASSOC_FIND_DEVICE

Description:

This command is a proxy call to the AssocFindDevice() function.

Usage:
SREQ:

| 1 | 1 | 1 | 1 |
|---------------|-------------|-------------|--------|
| Length = 0x01 | Cmd0 = 0x27 | Cmd1 = 0x49 | Number |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--------------------------------------|
| Number | 1 | Nth active entry in the device list. |

SRSP:

| 1 | 1 | 1 | 18 |
|---------------|-------------|-------------|--------|
| Length = 0x12 | Cmd0 = 0x67 | Cmd1 = 0x49 | Device |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Device | 18 | The packed (LSB-MSB) associated_devices_t structure returned by the proxy call to AssocFindDevice(). The device short address is set to INVALID_NODE_ADDR to indicate failure. |

3.10.1.25 UTIL_ASSOC_GET_WITH_ADDRESS

Description:

This command is a proxy call to the AssocGetWithAddress() function.

Usage:
SREQ:

| 1 | 1 | 1 | 8 | 2 |
|---------------|-------------|-------------|---------|---------|
| Length = 0x0A | Cmd0 = 0x27 | Cmd1 = 0x4A | ExtAddr | NwkAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| ExtAddr | 8 | The extended address to use for the lookup or all zeroes to use the NwkAddr for the lookup. |
| NwkAddr | 2 | Network Address (LSB-MSB) to use for the lookup if the ExtAddr is all zeroes. |

SRSP:

| 1 | 1 | 1 | 18 |
|---------------|-------------|-------------|--------|
| Length = 0x12 | Cmd0 = 0x67 | Cmd1 = 0x4A | Device |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Device | 18 | The packed (LSB-MSB) associated_devices_t structure returned by the proxy call to AssocGetWithAddress (). The device short address is set to INVALID_NODE_ADDR to indicate failure. |

3.10.1.26 UTIL_ZCL_KEY_EST_INIT_EST

Description:

This command is a proxy call to zclGeneral_KeyEstablish_InitiateKeyEstablishment().

Usage:**SREQ:**

| | | | | | | | |
|---------------|-------------|-------------|--------|--------|----------|----------|------|
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 8 |
| Length = 0x0C | Cmd0 = 0x27 | Cmd1 = 0x80 | TaskId | SeqNum | EndPoint | AddrMode | Addr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| TaskId | 1 | The OSAL Task Id making the request. |
| SeqNum | 1 | The sequence number of the request. |
| EndPoint | 1 | The endpoint on the partner. |
| AddrMode | 1 | The address mode to the partner according to the afAddrMode_t enumeration in AF.h. |
| Addr | 8 | If AddrMode is afAddr64Bit, the 8-byte extended address of the partner; otherwise the 2-byte network address of the partner. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x67 | Cmd1 = 0x80 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | The ZStatus_t returned by the proxy call to zclGeneral_KeyEstablishment_InitiateKeyEstablishment(). |

3.10.1.27 UTIL_ZCL_KEY_EST_SIGN**Description:**

This command is a proxy call to zclGeneral_KeyEstablishment_ECDSASign().

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|----------|-------|
| 1 | 1 | 1 | 1 | 1 |
| Length = 0x0C | Cmd0 = 0x27 | Cmd1 = 0x81 | InputLen | Input |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------------------------|
| InputLen | 1 | The length of the input data. |
| Input | InputLen | The input data. |

SRSP:

| | | | | |
|---------------|-------------|-------------|--------|-----|
| 1 | 1 | 1 | 1 | 42 |
| Length = 0x2B | Cmd0 = 0x67 | Cmd1 = 0x81 | Status | Key |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| Status | 1 | The ZStatus_t returned by the proxy call to zclGeneral_KeyEstablishment_ECDSASign (). |
| Key | 42 | The output key on success. |

3.10.2 MT_UTIL Callbacks**3.10.2.1 UTIL_SYNC_REQ****Description:**

This is an asynchronous request/response handshake.

Usage:**AREQ:**

| | | |
|---------------|-------------|-------------|
| 1 | 1 | 1 |
| Length = 0x00 | Cmd0 = 0x47 | Cmd1 = 0xE0 |

3.10.2.2 UTIL_ZCL_KEY_ESTABLISH_IND**Description:**

This is the RPC proxy indication for a ZCL_KEY_ESTABLISH_IND.

Usage:**AREQ:**

| | | | | | | | |
|---------------|-------------|-------------|--------|-------|--------|----------|-------|
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 |
| Length = 0x06 | Cmd0 = 0x47 | Cmd1 = 0xE1 | TaskId | Event | Status | WaitTime | Suite |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| TaskId | 1 | The OSAL Task Id registered to receive this indication (see UTIL_ZCL_KEY_EST_INIT_EST). |
| Event | 1 | The OSAL message event. |
| Status | 1 | The OSAL message status. |
| WaitTime | 1 | The wait time. |
| Suite | 2 | The key establishment suite. |

3.11 MT_VERSION

This interface contains information about the release version of the software. There is no direct command for tester to interact with this interface.

3.12 MT_ZDO

This interface allows the tester to issue commands to the ZDO layer in the target and receive responses. Each of these messages has a corresponding message that is returned by the target. The response message only indicates that the command message was received and executed. The result of the command execution will be conveyed to the tester via a callback message interface.

3.12.1 MT_ZDO Commands**3.12.1.1 ZDO_NWK_ADDR_REQ****Description:**

This message will request the device to send a “Network Address Request”. This message sends a broadcast message looking for a 16 bit address with a known 64 bit IEEE address. You must subscribe to “ZDO Network Address Response” to receive the response to this message. Check section 3.0.1.7 for more details on callback subscription. The response message listed below only indicates whether or not the message was received properly.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|-------------|---------|------------|
| Byte: 1 | 1 | 1 | 8 | 1 | 1 |
| Length = 0x0A | Cmd0 = 0x25 | Cmd1 = 0x00 | IEEEAddress | ReqType | StartIndex |

Attributes:

| Attribute | Length (byte) | Description | | | | | | |
|--------------------------------------|---------------|---|------|-------|------------------------|------|--------------------------------------|------|
| IEEEAddress | 8 | 64 bit IEEE address of the device. | | | | | | |
| | | Value that the search was executed on. | | | | | | |
| ReqType | 1 | <table><tr><th>Type</th><th>Value</th></tr><tr><td>Single Device response</td><td>0x00</td></tr><tr><td>Extended, include associated devices</td><td>0x01</td></tr></table> | Type | Value | Single Device response | 0x00 | Extended, include associated devices | 0x01 |
| Type | Value | | | | | | | |
| Single Device response | 0x00 | | | | | | | |
| Extended, include associated devices | 0x01 | | | | | | | |
| StartIndex | 1 | Starting index into the list of children. This is used to get more of the list if the list is too large for one message. | | | | | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x00 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.2 ZDO_IEEE_ADDR_REQ**Description:**

This command will request a device's IEEE 64-bit address. You must subscribe to "ZDO IEEE Address Response" to receive the data response to this message. The response message listed below only indicates whether or not the message was received properly.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|-----------|---------|------------|
| Byte: 1 | 1 | 1 | 2 | 1 | 1 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x01 | ShortAddr | ReqType | StartIndex |

Attributes:

| Attribute | Length (byte) | Description | | | | | | |
|--------------------------------------|---------------|---|------|-------|------------------------|------|--------------------------------------|------|
| ShortAddr | 2 | Specifies the short address of the device. Value that the search was executed on. | | | | | | |
| ReqType | 1 | <table><tr><th>Type</th><th>Value</th></tr><tr><td>Single Device response</td><td>0x00</td></tr><tr><td>Extended, include associated devices</td><td>0x01</td></tr></table> | Type | Value | Single Device response | 0x00 | Extended, include associated devices | 0x01 |
| Type | Value | | | | | | | |
| Single Device response | 0x00 | | | | | | | |
| Extended, include associated devices | 0x01 | | | | | | | |
| StartIndex | 1 | Starting index into the list of children. This is used to get more of the list if the list is too large for one message. | | | | | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x01 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.3 ZDO_NODE_DESC_REQ

Description:

This command is generated to inquire about the Node Descriptor information of the destination device

Usage

SREQ:

| | | | | |
|---------------|-------------|-------------|---------|-------------------|
| 1 | 1 | 1 | 2 | 2 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x02 | DstAddr | NWKAddrOfInterest |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x02 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.4 ZDO_POWER_DESC_REQ

Description:

This command is generated to inquire about the Power Descriptor information of the destination device.

Usage:

SREQ:

| | | | | |
|---------------|-------------|-------------|---------|-------------------|
| Byte: 1 | 1 | 1 | 2 | 2 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x03 | DstAddr | NWKAddrOfInterest |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x03 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.5 ZDO_SIMPLE_DESC_REQ

Description:

This command is generated to inquire as to the Simple Descriptor of the destination device's Endpoint.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|---------|-------------------|----------|
| Byte: 1 | 1 | 1 | 2 | 2 | 1 |
| Length = 0x05 | Cmd0 = 0x25 | Cmd1 = 0x04 | DstAddr | NWKAddrOfInterest | Endpoint |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |
| Endpoint | 1 | Specifies the application endpoint the data is from. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x04 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.6 ZDO_ACTIVE_EP_REQ**Description:**

This command is generated to request a list of active endpoint from the destination device.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|-------------------|
| Byte: 1 | 1 | 1 | 2 | 2 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x05 | DstAddr | NWKAddrOfInterest |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x05 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.7 ZDO_MATCH_DESC_REQ**Description:**

This command is generated to request the device match descriptor.

Usage:**SREQ:**

| | | | | | |
|--------------------|-------------|-------------|---------|-------------------|-----------|
| 1 | 1 | 1 | 2 | 2 | 2 |
| Length = 0x08-0x48 | Cmd0 = 0x25 | Cmd1 = 0x06 | DstAddr | NwkAddrOfInterest | ProfileId |

| | | | |
|---------------|---------------|----------------|----------------|
| 1 | 0-32 | 1 | 0-32 |
| NumInClusters | InClusterList | NumOutClusters | OutClusterList |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |
| ProfileId | 2 | Specifies the profile Id of the device |
| NumInClusters | 1 | Specifies the number of Id's in the InClusterList. |
| InClusterList | 0-32 | Contains the input cluster Id's. |
| NumOutClusters | 1 | Specifies the number of Id's in the OutClusterList. |
| OutClusterList | 0-32 | Contains the output cluster Id's. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x06 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.8 ZDO_COMPLEX_DESC_REQ**Description:**

This command is generated to request for the destination device's complex descriptor.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|-------------------|
| Byte: 1 | 1 | 1 | 2 | 2 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x07 | DstAddr | NWKAddrOfInterest |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x07 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.9 ZDO_USER_DESC_REQ**Description:**

This command is generated to request for the destination device's user descriptor.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|-------------------|
| 1 | 1 | 1 | 2 | 2 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x08 | DstAddr | NWKAddrOfInterest |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x08 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.10 ZDO_END_DEVICE_ANNCE**Description:**

This command will cause the CC2480 device to issue an “End device announce” broadcast packet to the network. This is typically used by an end-device to announce itself to the network.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|---------|----------|-------------|
| 1 | 1 | 1 | 2 | 8 | 1 |
| Length = 0x0B | Cmd0 = 0x25 | Cmd1 = 0x0A | NwkAddr | IEEEAddr | Capabilites |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| NwkAddr | 2 | Specifies network address of the device generating the request. |
| IEEEAddr | 8 | Specifies the 64 bit IEEE Address of the device being announced. |
| Capabilites | 1 | Specifies MAC capabilities Bit: 0 – Alternate PAN Coordinator 1 – Device type: 1- ZigBee Router; 0 – End Device 2 – Power Source: 1 Main powered 3 – Receiver on when Idle 4 – Reserved 5 – Reserved 6 – Security capability 7 – Reserved |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x0A | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.11 ZDO_USER_DESC_SET**Description:**

This command is generated to write a User Descriptor value to the targeted device

Usage:**SREQ:**

| | | | | | | |
|--------------------|-------------|-------------|---------|-------------------|-----|----------------|
| 1 | 1 | 1 | 2 | 2 | 1 | 0-16 |
| Length = 0x05-0x15 | Cmd0 = 0x25 | Cmd1 = 0x0B | DstAddr | NWKAddrOfInterest | Len | UserDescriptor |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|---|
| DstAddr | 2 | Specifies network address of the device generating the set request. |
| NWKAddrOfInterest | 2 | Specifies NWK address of the destination device being queried. |
| Len | 1 | Specifies the length of the user descriptor. |
| UserDescriptor | 0-16 | User descriptor array (can be up to 16 bytes). |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x0B | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.12 ZDO_SERVER_DISC_REQ**Description:**

The command is used for local device to discover the location of a particular system server or servers as indicated by the ServerMask parameter. The destination addressing on this request is 'broadcast to all RxOnWhenIdle devices'.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|------------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x25 | Cmd1 = 0x0C | ServerMask |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|---|
| ServerMask | 2 | Specifies the system server capabilities of the device. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x0C | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.13 ZDO_END_DEVICE_BIND_REQ**Description:**

This command is generated to request an End Device Bind with the destination device.

Usage:**SREQ:**

| | | | | | |
|--------------------|---------------|---------------|----------------|------------------|----------|
| 1 | 1 | 1 | 2 | 2 | 1 |
| Length = 0x09-0x49 | Cmd0 = 0x25 | Cmd1 = 0x20 | DstAddr | LocalCoordinator | Endpoint |
| 2 | 1 | 0-32 | 1 | 0-32 | |
| ProfileId | NumInClusters | InClusterList | NumOutClusters | OutClusterList | |

Attributes:

| Attribute | Length (byte) | Description |
|------------------|---------------|--|
| DstAddr | 2 | Specifies NWK address of the device generating the inquiry. |
| LocalCoordinator | 2 | Specifies local coordinator's short address. In the case of source binding, it's the short address of the source address |
| IEEE | 8 | Local coordinator's IEEE address |
| Endpoint | 1 | Device's endpoint. |
| ProfileId | 2 | Specifies the profile Id of the device. |
| NumInClusters | 1 | Specifies the number of Id's in the InClusterList. |
| InClusterList | 0-32 | Contains the input cluster Id's. |
| NumOutClusters | 1 | Specifies the number of Id's in the OutClusterList. |
| OutClusterList | 0-32 | Contains the output cluster Id's. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x20 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.14 ZDO_BIND_REQ**Description:**

This command is generated to request a Bind.

Usage:**SREQ:**

| | | | | | | |
|--------------------|-------------|-------------|---------|------------|-------------|-----------|
| 1 | 1 | 1 | 2 | 8 | 1 | 2 |
| Length = 0x10-0x17 | Cmd0 = 0x25 | Cmd1 = 0x21 | DstAddr | SrcAddress | SrcEndpoint | ClusterId |
| 1 | 2/8 | 0/1 | | | | |
| DstAddrMode | DstAddress | DstEndpoint | | | | |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | |
|------------------------------------|---------------|---|-------|---------------------|-------------|---------------------|------|---------------------|---------------|------|---------------|----------------|------|----------------|----------------|------|----------------|-----------|------|-----------|
| DstAddr | 2 | Specifies the destination address of the device generating the bind request | | | | | | | | | | | | | | | | | | |
| SrcAddress | 8 | 64 bit Binding source IEEE address | | | | | | | | | | | | | | | | | | |
| SrcEndpoint | 1 | Specifies the binding source endpoint. | | | | | | | | | | | | | | | | | | |
| ClusterId | 2 | Specifies the cluster Id to match in messages. | | | | | | | | | | | | | | | | | | |
| Specifies destination address mode | | | | | | | | | | | | | | | | | | | | |
| DstAddrMode | 1 | <table><tr><th>Mode</th><th>Value</th><th>Description</th></tr><tr><td>ADDRESS_NOT_PRESENT</td><td>0x00</td><td>Address Not Present</td></tr><tr><td>GROUP_ADDRESS</td><td>0x01</td><td>Group address</td></tr><tr><td>ADDRESS_16_BIT</td><td>0x02</td><td>Address 16 bit</td></tr><tr><td>ADDRESS_64_BIT</td><td>0x03</td><td>Address 64 bit</td></tr><tr><td>BROADCAST</td><td>0xFF</td><td>Broadcast</td></tr></table> | Mode | Value | Description | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | GROUP_ADDRESS | 0x01 | Group address | ADDRESS_16_BIT | 0x02 | Address 16 bit | ADDRESS_64_BIT | 0x03 | Address 64 bit | BROADCAST | 0xFF | Broadcast |
| | | Mode | Value | Description | | | | | | | | | | | | | | | | |
| | | ADDRESS_NOT_PRESENT | 0x00 | Address Not Present | | | | | | | | | | | | | | | | |
| | | GROUP_ADDRESS | 0x01 | Group address | | | | | | | | | | | | | | | | |
| | | ADDRESS_16_BIT | 0x02 | Address 16 bit | | | | | | | | | | | | | | | | |
| | | ADDRESS_64_BIT | 0x03 | Address 64 bit | | | | | | | | | | | | | | | | |
| BROADCAST | 0xFF | Broadcast | | | | | | | | | | | | | | | | | | |
| DstAddress | 8/2 | Binding destination IEEE address. Not to be confused with DstAddr. | | | | | | | | | | | | | | | | | | |
| DstEndpoint | 1/0 | Specifies the binding destination endpoint. It is used only when DstAddrMode is 64 bits extended address | | | | | | | | | | | | | | | | | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x21 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.15 ZDO_UNBIND_REQ

Description:

This command is generated to request an un-bind.

Usage:

SREQ:

| | | | | | | |
|--------------------|-------------|-------------|---------|------------|-------------|-----------|
| 1 | 1 | 1 | 2 | 8 | 1 | 2 |
| Length = 0x10-0x17 | Cmd0 = 0x25 | Cmd1 = 0x22 | DstAddr | SrcAddress | SrcEndpoint | ClusterId |

| | | |
|-------------|------------|-------------|
| 1 | 2/8 | 0/1 |
| DstAddrMode | DstAddress | DstEndpoint |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|--|
| DstAddr | 2 | Specifies destination address of the device generating the bind request. |
| SrcAddress | 8 | Specifies 64 bit Binding source IEEE address. |
| SrcEndpoint | 1 | Specifies the binding source endpoint. |
| ClusterId | 2 | Specifies cluster Id to match in messages. |

Specifies 64 bit Binding destination address mode:

| Mode | Value | Description |
|---------------------|-------|---------------------|
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present |
| GROUP_ADDRESS | 0x01 | Group address |
| ADDRESS_16_BIT | 0x02 | Address 16 bit |
| ADDRESS_64_BIT | 0x03 | Address 64 bit |
| BROADCAST | 0xFF | Broadcast |

| | | |
|-------------|---|---|
| DstAddrMode | 1 | |
| DstAddress | 8 | Specifies 64 bit Binding destination IEEE address. Not to be confused with DstAddr. |
| DstEndpoint | 1 | Specifies the binding destination endpoint |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x22 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.16 ZDO_MGMT_NWK_DISC_REQ

Description:

This command is generated to request the destination device to perform a network discovery.

Usage:

SREQ:

| | | | | | | |
|---------------|-------------|-------------|---------|--------------|--------------|------------|
| 1 | 1 | 1 | 2 | 4 | 1 | 1 |
| Length = 0x08 | Cmd0 = 0x25 | Cmd1 = 0x30 | DstAddr | ScanChannels | ScanDuration | StartIndex |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--------------|---------------|--|---------|-------|------|------------|--------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|
| DstAddr | 2 | Specifies the network address of the device performing the discovery. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| ScanChannels | 4 | <div>Specifies the Bit Mask for channels to scan:</div> <table><tr><th>Channel</th><th>Value</th></tr><tr><td>NONE</td><td>0x00000000</td></tr><tr><td>ALL_CHANNELS</td><td>0x07FFF800</td></tr><tr><td>CHANNEL 11</td><td>0x00000800</td></tr><tr><td>CHANNEL 12</td><td>0x00001000</td></tr><tr><td>CHANNEL 13</td><td>0x00002000</td></tr><tr><td>CHANNEL 14</td><td>0x00004000</td></tr><tr><td>CHANNEL 15</td><td>0x00008000</td></tr><tr><td>CHANNEL 16</td><td>0x00010000</td></tr><tr><td>CHANNEL 17</td><td>0x00020000</td></tr><tr><td>CHANNEL 18</td><td>0x00040000</td></tr><tr><td>CHANNEL 19</td><td>0x00080000</td></tr><tr><td>CHANNEL 20</td><td>0x00100000</td></tr><tr><td>CHANNEL 21</td><td>0x00200000</td></tr><tr><td>CHANNEL 22</td><td>0x00400000</td></tr><tr><td>CHANNEL 23</td><td>0x00800000</td></tr><tr><td>CHANNEL 24</td><td>0x01000000</td></tr><tr><td>CHANNEL 25</td><td>0x02000000</td></tr><tr><td>CHANNEL 26</td><td>0x04000000</td></tr></table> | Channel | Value | NONE | 0x00000000 | ALL_CHANNELS | 0x07FFF800 | CHANNEL 11 | 0x00000800 | CHANNEL 12 | 0x00001000 | CHANNEL 13 | 0x00002000 | CHANNEL 14 | 0x00004000 | CHANNEL 15 | 0x00008000 | CHANNEL 16 | 0x00010000 | CHANNEL 17 | 0x00020000 | CHANNEL 18 | 0x00040000 | CHANNEL 19 | 0x00080000 | CHANNEL 20 | 0x00100000 | CHANNEL 21 | 0x00200000 | CHANNEL 22 | 0x00400000 | CHANNEL 23 | 0x00800000 | CHANNEL 24 | 0x01000000 | CHANNEL 25 | 0x02000000 | CHANNEL 26 | 0x04000000 |
| Channel | Value | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| NONE | 0x00000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| ALL_CHANNELS | 0x07FFF800 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 11 | 0x00000800 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 12 | 0x00001000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 13 | 0x00002000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 14 | 0x00004000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 15 | 0x00008000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 16 | 0x00010000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 17 | 0x00020000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 18 | 0x00040000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 19 | 0x00080000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 20 | 0x00100000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 21 | 0x00200000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 22 | 0x00400000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 23 | 0x00800000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 24 | 0x01000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 25 | 0x02000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CHANNEL 26 | 0x04000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| ScanDuration | 1 | Specifies the scanning time. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| StartIndex | 1 | Specifies where to start in the response array list. The result may contain more entries than can be reported, so this field allows the user to retrieve the responses anywhere in the array list. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x30 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.17 ZDO_MGMT_LQI_REQ**Description:**

This command is generated to request the destination device to perform a LQI query of other devices in the network.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|------------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x25 | Cmd1 = 0x31 | DstAddr | StartIndex |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--|
| DstAddr | 2 | Specifies the network address of the device generating the query. |
| StartIndex | 1 | Specifies where to start in the response array list. The result may contain more entries than can be reported, so this field allows the user to retrieve the responses anywhere in the array list. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x31 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.18 ZDO_MGMT_RTG_REQ**Description:**

This command is generated to request the Routing Table of the destination device

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|------------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x25 | Cmd1 = 0x32 | DstAddr | StartIndex |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--|
| DstAddr | 2 | Specifies the network address of the device generating the query. |
| StartIndex | 1 | Specifies where to start in the response array list. The result may contain more entries than can be reported, so this field allows the user to retrieve the responses anywhere in the array list. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x32 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.19 ZDO_MGMT_BIND_REQ**Description**

This command is generated to request the Binding Table of the destination device.

Usage**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------|------------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x25 | Cmd1 = 0x33 | DstAddr | StartIndex |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--|
| DstAddr | 2 | Specifies the network address of the device being queried. |
| StartIndex | 1 | Specifies where to start in the response array list. The result may contain more entries than can be reported, so this field allows the user to retrieve the responses anywhere in the array list. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x33 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.20 ZDO_MGMT_LEAVE_REQ

Description:

This command is generated to request a Management Leave Request for the target device

Usage:
SREQ:

| | | | | | |
|---------------|-------------|-------------|---------|------------|-----------------------|
| 1 | 1 | 1 | 2 | 8 | 1 |
| Length = 0x0B | Cmd0 = 0x25 | Cmd1 = 0x34 | DstAddr | DeviceAddr | RemoveChildren/Rejoin |

Attributes:

| Attribute | Length (byte) | Description |
|-----------------------|---------------|--|
| DstAddr | 2 | Specifies the network address of the device generating the request. |
| DeviceAddress | 8 | Specifies the 64 bit IEEE Address of the target device you want to leave. This field has a value of 1 if the device being asked to leave the network is also being asked to remove its child devices, if any. Otherwise it has a value of 0. Currently, the stack profile of Home Control specifies that this field should always be set to 0. |
| RemoveChildren/Rejoin | 1 | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x34 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.21 ZDO_MGMT_DIRECT_JOIN_REQ

Description:

This command is generated to request the Management Direct Join Request of a designated device.

Usage:
SREQ:

| | | | | | |
|---------------|-------------|-------------|---------|------------|---------|
| Byte: 1 | 1 | 1 | 2 | 8 | 1 |
| Length = 0x0B | Cmd0 = 0x25 | Cmd1 = 0x35 | DstAddr | DeviceAddr | CapInfo |

Attributes:

| Attribute | Length (byte) | Description |
|---------------|---------------|--|
| DstAddr | 2 | Network address of the device to which the device specified in DeviceAddress is to join. |
| DeviceAddress | 8 | The 64 bit IEEE Address of the device you want to be joined to the device at DstAddr. |
| CapInfo | 1 | Specifies the operating capabilities of the device being directly joined. Bit weighted values follow: Bit: 0 – Alternate PAN Coordinator 1 – Device type: 1- ZigBee Router; 0 – End Device 2 – Power Source: 1 Main powered 3 – Receiver on when Idle 4 – Reserved 5 – Reserved 6 – Security capability 7 – Reserved |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x35 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.22 ZDO_MGMT_PERMIT_JOIN_REQ**Description:**

This command is generated to set the Permit Join for the destination device

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|-------------|---------|----------|----------------|
| 1 | 1 | 1 | 2 | 1 | 1 |
| Length = 0x04 | Cmd0 = 0x25 | Cmd1 = 0x36 | DstAddr | Duration | TCSignificance |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| DstAddr | 2 | Specifies the network address of the destination device whose Permit Join information is to be modified. |
| Duration | 1 | Specifies the duration to permit joining. 0 = join disabled. 0xff = join enabled. 0x01-0xfe = number of seconds to permit joining. |
| TCSignificance | 1 | Trust Center Significance. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x36 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.23 ZDO_MGMT_NWK_UPDATE_REQ**Description:**

This command is provided to allow updating of network configuration parameters or to request information from devices on network conditions in the local operating environment.

Usage:**SREQ:**

| | | | | | |
|---------------|-------------|----------------|---------|-------------|-------------|
| 1 | 1 | 1 | 2 | 1 | 4 |
| Length = 0x0B | Cmd0 = 0x25 | Cmd1 = 0x37 | DstAddr | DstAddrMode | ChannelMask |
| 1 | 1 | 2 | | | |
| ScanDuration | ScanCount | NwkManagerAddr | | | |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| DstAddr | 2 | Short address of the destination device(s). The destination addressing on this primitive can be unicast or broadcast to all devices for which macRxOnWhenIdle=TRUE (i.e., 0xFFFD) |

Destination address mode:

| Mode | Value | Description |
|---------------------|-------|---------------------|
| ADDRESS_NOT_PRESENT | 0x00 | Address Not Present |
| GROUP_ADDRESS | 0x01 | Group address |
| ADDRESS_16_BIT | 0x02 | Address 16 bit |
| ADDRESS_64_BIT | 0x03 | Address 64 bit |
| BROADCAST | 0xFF | Broadcast |

A bitmap indicating which channels are to be scanned:

| Channel | Value |
|--------------|------------|
| NONE | 0x00000000 |
| ALL_CHANNELS | 0x07FFF800 |
| CHANNEL 11 | 0x00000800 |
| CHANNEL 12 | 0x00001000 |
| CHANNEL 13 | 0x00002000 |
| CHANNEL 14 | 0x00004000 |
| CHANNEL 15 | 0x00008000 |
| CHANNEL 16 | 0x00010000 |
| CHANNEL 17 | 0x00020000 |
| CHANNEL 18 | 0x00040000 |
| CHANNEL 19 | 0x00080000 |
| CHANNEL 20 | 0x00100000 |
| CHANNEL 21 | 0x00200000 |
| CHANNEL 22 | 0x00400000 |
| CHANNEL 23 | 0x00800000 |
| CHANNEL 24 | 0x01000000 |
| CHANNEL 25 | 0x02000000 |
| CHANNEL 26 | 0x04000000 |

| | | |
|----------------|---|--|
| ScanDuration | 1 | A value used to calculate the length of time to spend scanning each channel |
| ScanCount | 1 | This field represents the number of energy scans to be conducted and reported |
| NwkManagerAddr | 2 | Indicates the NWK address for the device with the Network Manager bit set in its Node Descriptor |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x36 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Status is either Success (0) or Failure (1). |

3.12.1.24 ZDO_MSG_CB_REGISTER

Description:

This command registers for a ZDO callback (see Reference[3], “6. ZDO Message Requests” for example usage).

Usage:

SREQ:

| | | | |
|---------------|-------------|-------------|-----------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x25 | Cmd1 = 0x3E | ClusterId |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| ClusterId | 2 | Specifies the ZDO Cluster Id for which to receive a ZDO callback. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x3E | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Return value of the call to ZDO_RegisterForZDOMsg(). |

3.12.1.25 ZDO_MSG_CB_REMOVE**Description:**

This command removes a registration for a ZDO callback (see Reference[3], “6. ZDO Message Requests” for example usage).

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|-----------|
| 1 | 1 | 1 | 2 |
| Length = 0x02 | Cmd0 = 0x25 | Cmd1 = 0x3F | ClusterId |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| ClusterId | 2 | Specifies the ZDO Cluster Id for which to receive a ZDO callback. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x3F | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Return value of the call to ZDO_RemoveRegisteredCB (). |

3.12.1.26 ZDO_STARTUP_FROM_APP**Description:**

This command starts the device in the network.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|------------|
| 1 | 1 | 1 | 2 |
| Length = 0x01 | Cmd0 = 0x25 | Cmd1 = 0x40 | StartDelay |

Attributes:

| Attribute | Length (byte) | Description |
|------------|---------------|--|
| StartDelay | 2 | Specifies the time delay before the device starts. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x40 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|-------------------------------|
| Status | 1 | 0x00 – Restored network state |

0x01 – New network state
 0x02 – Leave and not Started

3.12.1.27 ZDO_AUTO_FIND_DESTINATION

Description:

This function will issue a Match Description Request for the requested endpoint outputs. This message will generate a broadcast message.

Usage:

AREQ:

| | | | |
|---------------|-------------|-------------|----------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x45 | Cmd1 = 0x41 | Endpoint |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Endpoint | 1 | Specifies which endpoint to issue the End Device Bind request for. |

3.12.1.28 ZDO_SET_LINK_KEY

Description:

This Command sets the application link key for a given device.

Usage:

SREQ:

| | | | | | |
|---------------|-------------|-------------|-----------|----------|-------------|
| 1 | 1 | 1 | 2 | 8 | 16 |
| Length = 0x1A | Cmd0 = 0x25 | Cmd1 = 0x23 | ShortAddr | IEEEAddr | LinkKeyData |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| ShortAddr | 2 | Specifies the short address of the pair device of the link key. |
| IEEEAddr | 8 | Specifies the IEEE address of the pair device of the link key |
| LinkKeyData | 16 | 128 bit link key data of the device. |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x23 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | 0x00 – Success 0x01 – Fail to add to address manager. 0x11 – Security manager key table full |

3.12.1.29 ZDO_REMOVE_LINK_KEY

Description:

This command removes the application link key of a given device.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|----------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x25 | Cmd1 = 0x24 | IEEEAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| IEEEAddr | 8 | Specifies the IEEE address of the pair device of the link key |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x24 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | 0x00 – Success 0xC8 – Unknown device. |

3.12.1.30 ZDO_GET_LINK_KEY**Description:**

This command retrieves the application link key of a given device.

Usage:**SREQ:**

| | | | |
|---------------|-------------|-------------|----------|
| 1 | 1 | 1 | 8 |
| Length = 0x08 | Cmd0 = 0x25 | Cmd1 = 0x25 | IEEEAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| IEEEAddr | 8 | Specifies the IEEE address of the pair device of the link key |

SRSP:

| | | | | | |
|---------------|-------------|-------------|--------|----------|-------------|
| 1 | 1 | 1 | 1 | 8 | 16 |
| Length = 0x19 | Cmd0 = 0x65 | Cmd1 = 0x25 | Status | IEEEAddr | LinkKeyData |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|--|
| Status | 1 | 0x00 – Success 0xC8 – Unknown device. |
| IEEEAddr | 8 | IEEE address of the device |
| LinkKeyData | 16 | Link key data of the device. |

3.12.1.31 ZDO_NETWORK_DISCOVERY_REQ**Description:**

This command is used to initiate a network discovery (active scan).

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|---------------|---------------|
| Byte: 1 | 1 | 1 | 4 | 1 |
| Length = 0x05 | Cmd0 = 0x45 | Cmd1 = 0x26 | Scan Channels | Scan Duration |

Attributes:

| Attribute | Length (byte) | Description | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|---------------|---|------------|---|------|------------|--------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|
| Bit mask for channels to scan. Type: ZIGBEE_CHANNELS | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Scan Channels | 4 | <table><tr><th>Channel</th><th>Value</th></tr><tr><td>NONE</td><td>0x00000000</td></tr><tr><td>ALL_CHANNELS</td><td>0x07FFF800</td></tr><tr><td>CHANNEL 11</td><td>0x00000800</td></tr><tr><td>CHANNEL 12</td><td>0x00001000</td></tr><tr><td>CHANNEL 13</td><td>0x00002000</td></tr><tr><td>CHANNEL 14</td><td>0x00004000</td></tr><tr><td>CHANNEL 15</td><td>0x00008000</td></tr><tr><td>CHANNEL 16</td><td>0x00010000</td></tr><tr><td>CHANNEL 17</td><td>0x00020000</td></tr><tr><td>CHANNEL 18</td><td>0x00040000</td></tr><tr><td>CHANNEL 19</td><td>0x00080000</td></tr><tr><td>CHANNEL 20</td><td>0x00100000</td></tr><tr><td>CHANNEL 21</td><td>0x00200000</td></tr><tr><td>CHANNEL 22</td><td>0x00400000</td></tr><tr><td>CHANNEL 23</td><td>0x00800000</td></tr><tr><td>CHANNEL 24</td><td>0x01000000</td></tr><tr><td>CHANNEL 25</td><td>0x02000000</td></tr></table> | Channel | Value | NONE | 0x00000000 | ALL_CHANNELS | 0x07FFF800 | CHANNEL 11 | 0x00000800 | CHANNEL 12 | 0x00001000 | CHANNEL 13 | 0x00002000 | CHANNEL 14 | 0x00004000 | CHANNEL 15 | 0x00008000 | CHANNEL 16 | 0x00010000 | CHANNEL 17 | 0x00020000 | CHANNEL 18 | 0x00040000 | CHANNEL 19 | 0x00080000 | CHANNEL 20 | 0x00100000 | CHANNEL 21 | 0x00200000 | CHANNEL 22 | 0x00400000 | CHANNEL 23 | 0x00800000 | CHANNEL 24 | 0x01000000 | CHANNEL 25 | 0x02000000 |
| | | Channel | Value | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | NONE | 0x00000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | ALL_CHANNELS | 0x07FFF800 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 11 | 0x00000800 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 12 | 0x00001000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 13 | 0x00002000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 14 | 0x00004000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 15 | 0x00008000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 16 | 0x00010000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 17 | 0x00020000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 18 | 0x00040000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 19 | 0x00080000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 20 | 0x00100000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 21 | 0x00200000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 22 | 0x00400000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 23 | 0x00800000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 24 | 0x01000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | CHANNEL 25 | 0x02000000 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | Scan Duration | 1 | A value used to calculate the length of time to spend scanning each channel | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x26 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| Status | 1 | Success (0) |
| | | Invalid_Parameter (0x02). |
| | | ZNwkInvalidRequest(0xC2) if the device is already on a network. User ZDO_MGMT_NETWORK_DISCOVERY_REQ instead. Or leave the network first, then initiate the request. |
| | | MAC_SCAN_IN_PROGRESS (0xFC) if a channel change is in progress. |
| | | MAC_NO_RESOURCE (0x1A) if the operation could not complete because no memory resource were available. |

3.12.1.32 ZDO_JOIN_REQ**Description:**

This command is used to request the device to join itself to a parent device on a network.

Usage:**SREQ:**

| | | | | |
|---------------|-------------|-------------|-----------------|--------|
| Byte: 1 | 1 | 1 | 1 | 2 |
| Length = 0x0F | Cmd0 = 0x45 | Cmd1 = 0x27 | Logical Channel | Pan ID |
| 8 | 2 | 1 | 1 | |

Extended Pan ID Chosen Parent Parent Depth Stack Profile

Attributes:

| Attribute | Length (byte) | Description |
|-----------------|---------------|---|
| Logical Channel | 1 | Channel where the PAN is located |
| Pan ID | 2 | Id of PAN to join |
| Extended Pan ID | 8 | 64-bit extended PAN ID (ver. 1.1 only). If not v1.1 or don't care, use all 0xFF |
| Chosen Parent | 2 | Short address of the parent device chosen to join |
| Parent Depth | 1 | Depth of the parent |
| Stack Profile | 1 | Stack profile of the network to join |

SRSP:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x65 | Cmd1 = 0x27 | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| | | Success (0) |
| Status | 1 | ZNwkInvalidRequest (0xC2) if device is already on a network. Leave the network first, then try to join again. ZNwkNotPermitted (0xC3) if chosen router is not a valid short address. |

3.12.2 MT_ZDO Callbacks**3.12.2.1 ZDO_NWK_ADDR_RSP****Description:**

This command is issued by the tester to return the results from a ZDO_NWK_ADDR_REQ .

Usage**AREQ:**

| | | | | | |
|--------------------|-------------|--------------|--------|----------|---------|
| 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x0D-0x53 | Cmd0 = 0x45 | Cmd1 = 0x80 | Status | IEEEAddr | NwkAddr |
| 1 | 1 | 0-70 | | | |
| StartIndex | NumAssocDev | AssocDevList | | | |

Attributes:

| Attribute | Length (byte) | Description |
|--------------|---------------|---|
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| IEEEAddr | 8 | 64 bit IEEE address of source device. |
| NwkAddr | 2 | Specifies the short network address of responding device. |
| StartIndex | 1 | Specifies the starting index into the list of associated devices for this report. |
| NumAssocDev | 1 | Specifies the number of associated devices. |
| AssocDevList | 0-70 | Contains the list of network address for associated devices. This list can be a partial list if the entire list doesn't fit into a packet. If it is a partial list, the starting index is StartIndex. |

3.12.2.2 ZDO_IEEE_ADDR_RSP

Description:

This callback message is in response to the ZDO IEEE Address Request.

Usage:

AREQ:

| | | | | | |
|--------------------|-------------|--------------|--------|----------|---------|
| 1 | 1 | 1 | 1 | 8 | 2 |
| Length = 0x0D-0x53 | Cmd0 = 0x45 | Cmd1 = 0x81 | Status | IEEEAddr | NwkAddr |
| 1 | 1 | 0-70 | | | |
| StartIndex | NumAssocDev | AssocDevList | | | |

Attributes:

| Attribute | Length (byte) | Description |
|--------------|---------------|---|
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| IEEEAddr | 8 | 64 bit IEEE address of source device. |
| NwkAddr | 2 | Specifies the short network address of responding device. |
| StartIndex | 1 | Specifies the starting index into the list of associated devices for this report. |
| NumAssocDev | 1 | Specifies the number of associated devices. |
| AssocDevList | 0-70 | Contains the list of network address for associated devices. This list can be a partial list if the entire list doesn't fit into a packet. If it is a partial list, the starting index is StartIndex. |

3.12.2.3 ZDO_NODE_DESC_RSP

Description:

This callback message is in response to the ZDO Node Descriptor Request.

Usage:

AREQ:

| | | | | | |
|--|----------------------------|--------------------|--------------------|------------------------|---------|
| 1 | 1 | 1 | 2 | 1 | 2 |
| Length = 0x12 | Cmd0 = 0x45 | Cmd1 = 0x82 | SrcAddr | Status | NwkAddr |
| 1 | 1 | 1 | 2 | | |
| LogicalType/ ComplexDescAvailable/ UserDescAvailable | APSFlags/ FrequencyBand | MACCapabilityFlags | ManufacturerCode | | |
| 1 | 2 | 2 | 2 | 1 | |
| MaxBufferSize | MaxTransferSize | ServerMask | MaxOutTransferSize | DescriptorCapabilities | |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|---|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddrOfInterest | 2 | Device's short address of this Node descriptor |

Logical Type: Bit 0-2

| Description | Value |
|--------------------|-------|
| ZigBee Coordinator | 0 |
| ZigBee Router | 1 |
| ZigBee End Device | 2 |

LogicalType/
ComplexDescriptorAvailable/
UserDescriptorAvailable

1

ComplexDescriptorAvailable: Bit 4– Indicates if complex descriptor is available for the node

NodeFrequencyBand – Bit 5-7 – Identifies node frequency band capabilities

APSFlags/FrequencyBand

1

- APSFlags – Bit 0-4 – Node Flags assigned for APS. For V1.0 all bits are reserved.

- NodeFrequencyBand – Bit 5-7 – Identifies node frequency band capabilities

Capability flags stored for the MAC

MacCapabilitiesFlags

1

| Description | Value |
|--------------------------|-------|
| CAPINFO_DEVICETYPE_RFD | 0x00 |
| CAPINFO_ALTPANCOORD | 0x01 |
| CAPINFO_DEVICETYPE_FFD | 0x02 |
| CAPINFO_POWER_AC | 0x04 |
| CAPINFO_RCVR_ON_IDLE | 0x08 |
| CAPINFO_SECURITY_CAPABLE | 0x40 |
| CAPINFO_ALLOC_ADDR | 0x80 |

ManufacturerCode

2

Specifies a manufacturer code that is allocated by the ZigBee Alliance, relating to the manufacturer to the device.

MaxBufferSize

1

Indicates size of maximum NPDU. This field is used as a high level indication for management.

MaxInTransferSize

2

Indicates maximum size of Transfer up to 0x7fff (This field is reserved in version 1.0 and shall be set to zero).

Bit 0 - Primary Trust Center

1 - Backup Trust Center

2 - Primary Binding Table Cache

3 - Backup Binding Table Cache

4 - Primary Discovery Cache

5 - Backup Discovery Cache

ServerMask

2

MaxOutTransferSize

2

Indicates maximum size of Transfer up to 0x7fff (This field is reserved in version 1.0 and shall be set to zero).

DescriptorCapabilities

1

Specifies the Descriptor capabilities

3.12.2.4 ZDO_POWER_DESC_RSP

Description:

This callback message is in response to the ZDO Power Descriptor Request.

Usage:

AREQ:

| | | | | | |
|--|-------------|-------------|--|--------|---------|
| 1 | 1 | 1 | 2 | 1 | 2 |
| Length = 0x07 | Cmd0 = 0x45 | Cmd1 = 0x83 | SrcAddr | Status | NwkAddr |
| 1 | | | 1 | | |
| CurrentPowerMode/AvailablePowerSources | | | CurrentPowerSource/CurrentPowerSourceLevel | | |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | Specifies the message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Specifies Device's short address that this response |

| | | |
|--|---|---|
| CurrentPowerMode/AvailablePowerSources | 1 | describes. - CurrentPowerMode: bits 3-0 - AvailablePowerSources: bits 7-4 |
| CurrentPowerSource/CurrentPowerSourceLevel | 1 | - CurrentPowerSource: bits 3-0 - CurrentPowerSourceLevel: bits 7-4 |

3.12.2.5 ZDO_SIMPLE_DESC_RSP

Description:

This callback message is in response to the ZDO Simple Descriptor Request

Usage:

AREQ:

| | | | | | | |
|------------------|-------------|-------------|---------|--------|---------|-----|
| 1 | 1 | 1 | 2 | 1 | 2 | 1 |
| Length = 0x06-4E | Cmd0 = 0x45 | Cmd1 = 0x84 | SrcAddr | Status | NwkAddr | Len |

| | | | |
|----------|-----------|----------|---------------|
| 1 | 2 | 2 | 1 |
| Endpoint | ProfileId | DeviceId | DeviceVersion |

| | | | |
|---------------|---------------|----------------|----------------|
| 1 | 0-32 | 1 | 0-32 |
| NumInClusters | InClusterList | NumOutClusters | OutClusterList |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| SrcAddr | 2 | Specifies the message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Specifies Device's short address that this response describes. |
| Len | 1 | Specifies the length of the simple descriptor |
| Endpoint | 1 | Specifies Endpoint of the device |
| ProfileId | 2 | The profile Id for this endpoint. |
| DeviceId | 2 | The Device Description Id for this endpoint. |
| DeviceVersion | 1 | Defined as the following format 0 – Version 1.00 0x01-0x0F – Reserved. |
| NumInClusters | 1 | The number of input clusters in the InClusterList. |
| InClusterList | 0-32 | List of input cluster Id's supported. |
| NumOutClusters | 1 | The number of output clusters in the OutClusterList. |
| OutClusterList | 0-32 | List of output cluster Id's supported. |

3.12.2.6 ZDO_ACTIVE_EP_RSP

Description:

This callback message is in response to the ZDO Active Endpoint Request.

Usage:

AREQ:

| | | | | | | |
|--------------------|-------------|-------------|---------|--------|---------|---------------|
| 1 | 1 | 1 | 2 | 1 | 2 | 1 |
| Length = 0x06-0x53 | Cmd0 = 0x45 | Cmd1 = 0x85 | SrcAddr | Status | NwkAddr | ActiveEPCount |

| |
|--------------|
| 0-77 |
| ActiveEPList |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Device's short address that this response describes. |

| | | |
|---------------|------|---|
| ActiveEPCount | 1 | Number of active endpoint in the list |
| ActiveEPList | 0-77 | Array of active endpoints on this device. |

3.12.2.7 ZDO_MATCH_DESC_RSP

Description:

This callback message is in response to the ZDO Match Descriptor Request

Usage:

AREQ:

| | | | | | | |
|--------------------|-------------|-------------|---------|--------|---------|-------------|
| 1 | 1 | 1 | 2 | 1 | 2 | 1 |
| Length = 0x06-0x53 | Cmd0 = 0x45 | Cmd1 = 0x86 | SrcAddr | Status | NwkAddr | MatchLength |
| 0-77 | MatchList | | | | | |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Device's short address that this response describes. |
| MatchLength | 1 | The count of endpoints on the remote device that match the request criteria |
| MatchList | 0-77 | List of bytes, each represents an 8 bit endpoint |

3.12.2.8 ZDO_COMPLEX_DESC_RSP

Description:

This callback message is in response to the ZDO Complex Descriptor Request

Usage:

AREQ:

| | | | | | | |
|--------------------|-------------|-------------|---------|--------|---------|---------------|
| 1 | 1 | 1 | 2 | 1 | 2 | 1 |
| Length = 0x06-0x53 | Cmd0 = 0x45 | Cmd1 = 0x87 | SrcAddr | Status | NwkAddr | ComplexLength |
| 0-77 | ComplexList | | | | | |

Attributes:

| Attribute | Length (byte) | Description |
|-------------------|---------------|--|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Device's short address that this response describes. |
| ComplexLength | 1 | Length of the complex descriptor. |
| ComplexDescriptor | 0-77 | Array of bytes contains the complex descriptor. |

3.12.2.9 ZDO_USER_DESC_RSP

Description:

This callback message is in response to the ZDO User Descriptor Request

Usage:

AREQ:

| | | | | | | | |
|---|---|---|---|---|---|---|------|
| 1 | 1 | 1 | 2 | 1 | 2 | 1 | 0-77 |
|---|---|---|---|---|---|---|------|

Length = 0x06-0x16 Cmd0 = 0x45 Cmd1 = 0x88 SrcAddr Status NwkAddr Len UserDescriptor

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Device's short address that this response describes. |
| UserLength | 1 | Length of the complex descriptor. |
| UserDescriptor | 0-77 | Array of bytes contains user descriptor. |

3.12.2.10 ZDO_USER_DESC_CONF**Description:**

This confirmation notifies the user when the device receives a user descriptor.

Usage:**AREQ:**

| | | | | | |
|---------------|-------------|-------------|---------|--------|---------|
| 1 | 1 | 1 | 2 | 1 | 2 |
| Length = 0x05 | Cmd0 = 0x45 | Cmd1 = 0x89 | SrcAddr | Status | NwkAddr |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NWKAddr | 2 | Device's short address that this response describes. |

3.12.2.11 ZDO_SERVER_DISC_RSP**Description:**

This callback message is in response to the ZDO System Service Discovery Request. Upon receiving the request, remote devices shall compare the ServerMask parameter to the Server Mask field in their own Node descriptor. If no bits are found to match, no action is taken.

Usage:**AREQ:**

| | | | | | |
|---------------|-------------|-------------|---------|--------|------------|
| 1 | 1 | 1 | 2 | 1 | 2 |
| Length = 0x05 | Cmd0 = 0x45 | Cmd1 = 0x8A | SrcAddr | Status | ServerMask |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). Each bit signifies one system server capability of the node. The bit setting is defined in the following table: |

| | | Bit Number | Assignment |
|-------------|---|------------|-----------------------------|
| Server Mask | 2 | 0 | Primary Trust Center |
| | | 1 | Backup Trust Center |
| | | 2 | Primary Binding Table Cache |
| | | 3 | Backup Binding Table Cache |
| | | 4 | Primary Discovery Cache |
| | | 5 | Backup Discovery Cache |
| | | 6– 15 | Reserved |

3.12.2.12 ZDO_END_DEVICE_BIND_RSP

Description:

This callback message is in response to the ZDO End Device Bind Request

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|---------|--------|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x45 | Cmd1 = 0xA0 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.13 ZDO_BIND_RSP

Description:

This callback message is in response to the ZDO Bind Request.

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|---------|--------|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x45 | Cmd1 = 0xA1 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.14 ZDO_UNBIND_RSP

Description:

This callback message is in response to the ZDO Unbind Request.

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|---------|--------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x45 | Cmd1 = 0xA2 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | The message's source network address. |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.15 ZDO_MGMT_NWK_DISC_RSP

Description:

This callback message is in response to the ZDO Management Network Discovery Request

Usage:
AREQ:

| | | | | | | |
|--------------------|---------------------|-------------|---------|--------|--------------|------------|
| 1 | 1 | 1 | 2 | 1 | 1 | 1 |
| Length = 0x06-0x4E | Cmd0 = 0x45 | Cmd1 = 0xB0 | SrcAddr | Status | NetworkCount | StartIndex |
| 1 | 0-72 | | | | | |
| NetworkListCount | NetworkList Records | | | | | |

Attributes:

| Attribute | Length (byte) | Description |
|------------------|---------------|--|
| SrcAddr | 2 | Source address of the message. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NetworkCount | 1 | Total number of entries available in the device. |
| StartIndex | 1 | Where in the total number of entries this response starts. |
| NetworkListCount | 1 | Number of entries in this response. |

An array of NetworkList items. NetworkListCount contains the number of items in this table

| Name | Size | Description |
|----------------------------------|---------|---|
| PAN ID/Extended PAN ID | 2 bytes | PAN ID of the neighbor device |
| Logical Channel | 1 byte | The current logical channel occupied by the network. |
| Stack Profile / ZigBee Version | 1 byte | StackProfile: bits 3-0 ZigBeeVersion: bits 7-4 A ZigBee stack profile Identifier indicating the stack profile in use in the discovered network. The version of the ZigBee protocol in use in the discovered network. |
| Beacon Order / Super frame Order | 1 byte | BeaconOrder: bits 3-0 SuperframeOrder: bits 7-4 |
| Permit Joining | 1 byte | Permit joining flag |

NetworkList List

3.12.2.16 ZDO_MGMT_LQI_RSP

Description:

This callback message is in response to the ZDO Management LQI Request

Usage:
AREQ:

| | | | | | | |
|------------------------|--------------------------|-------------|---------|--------|----------------------|------------|
| 1 | 1 | 1 | 2 | 1 | 1 | 1 |
| Length = 0x06-0x48 | Cmd0 = 0x45 | Cmd1 = 0xB1 | SrcAddr | Status | NeighborTableEntries | StartIndex |
| 1 | 0-66 | | | | | |
| NeighborTableListCount | NeighborTableListRecords | | | | | |

Attributes:

| Attribute | Length (byte) | Description |
|----------------------|---------------|--|
| SrcAddr | 2 | Source address of the message. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| NeighborTableEntries | 1 | Total number of entries available in the device. |

StartIndex 1 Where in the total number of entries this response starts.
 NeighborLqiListCount 1 Number of entries in this response.

An array of NeighborLqiList items. NeighborLQICount contains the number of items in this table.

NeighborLqiList 0-66

| Name | Size | Description |
|--|---------|--|
| ExtendedPanID | 8 bytes | Extended PAN ID of the neighbor device |
| ExtendedAddress | 8 bytes | Network extended address |
| NetworkAddress | 2 bytes | Device short address |
| DeviceType/ RxOnWhenIdle/ Relationship | 1 byte | DeviceType: bits 1-0 RxOnWhenIdle: bits 3-2 Relationship: bits 6-4 |
| PermitJoining | 1 byte | PermitJoining: bits 1-0 |
| Depth | 1 byte | |
| LQI | 1 byte | |

3.12.2.17 ZDO_MGMT_RTG_RSP

Description:

This callback message is in response to the ZDO Management Routing Table Request.

Usage:

AREQ:

| | | | | | | |
|-----------------------|-------------------------|-------------|---------|--------|---------------------|------------|
| 1 | 1 | 1 | 2 | 1 | 1 | 1 |
| Length = 0x06-0x51 | Cmd0 = 0x45 | Cmd1 = 0xB2 | SrcAddr | Status | RoutingTableEntries | StartIndex |
| 1 | 0-75 | | | | | |
| RoutingTableListCount | RoutingTableListRecords | | | | | |

Attributes:

| Attribute | Length (byte) | Description |
|-----------------------|---------------|---|
| SrcAddr | 2 | Source address of the message. |
| Status | 1 | This field indicates either SUCCESS or FAILURE. |
| RoutingTableEntries | 1 | Total number of entries available in the device. |
| StartIndex | 1 | Where in the total number of entries this response starts. |
| RoutingTableListCount | 1 | Number of entries in this response. |
| | | An array of RtgList items. RtgListCount contains the number of items in this table. |

RoutingTableList 0-75

| Name | Size | Description |
|---------------------|---------|--|
| Destination Address | 2 bytes | Network destination address |
| Status | 1 byte | Route status: bits 2-0 0x00 Active 0x01 Discovery Underway 0x02 Discovery Failed 0x03 Inactive 0x04 – 0x07 Reserved |
| Next Hop | 2 bytes | Next hop network address |

3.12.2.18 ZDO_MGMT_BIND_RSP

Description:

This callback message is in response to the ZDO Management Binding Table Request

Usage:
AREQ:

| | | | | | | |
|-----------------------|-------------------------|-------------|---------|--------|---------------------|------------|
| Byte: 1 | 1 | 1 | 2 | 1 | 1 | 1 |
| Length = 0x06-0x51 | Cmd0 = 0x45 | Cmd1 = 0xB3 | SrcAddr | Status | BindingTableEntries | StartIndex |
| 1 | 0-75 | | | | | |
| BindingTableListCount | BindingTableListRecords | | | | | |

Attributes:

| Attribute | Length (byte) | Description |
|--------------------|---------------|--|
| SrcAddr | 2 | Source address of the message |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |
| BindTableEntries | 1 | Total number of entries available in the device. |
| StartIndex | 1 | Where in the total number of entries this response starts. |
| BindTableListCount | 1 | Number of entries in this response. |

An array of BindList items. BindListCount contains the number of items in this table.

| Name | Size | Description |
|-------------|---------|--|
| SrcAddr | 8 bytes | Binding Entry's source IEEE address |
| SrcEndpoint | 1 byte | Binding Entry's source endpoint |
| ClusterId | 1 byte | Message Id in binding table |
| DstAddrMode | 1 byte | Address mode for binding entry's destination address |
| DstAddr | 8 bytes | Binding Entry's destination IEEE address |
| DstEndpoint | 1 byte | Binding Entry's destination endpoint. For V1.1, this field is only present when the DstAddrMode is 64-bits extended address. |

BindTableList List

3.12.2.19 ZDO_MGMT_LEAVE_RSP

Description:

This callback message is in response to the ZDO Management Leave Request

Usage:
AREQ:

| | | | | |
|---------------|-------------|-------------|---------|--------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x45 | Cmd1 = 0xB4 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | Source address of the message |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.20 ZDO_MGMT_DIRECT_JOIN_RSP

Description:

This callback message is in response to the ZDO Management Direct Join Request

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|---------|--------|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x45 | Cmd1 = 0xB5 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | Source address of the message |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.21 ZDO_MGMT_PERMIT_JOIN_RSP

Description:

This callback message is in response to the ZDO Management Permit Join Request

Usage:

AREQ:

| | | | | |
|---------------|-------------|-------------|---------|--------|
| 1 | 1 | 1 | 2 | 1 |
| Length = 0x03 | Cmd0 = 0x45 | Cmd1 = 0xB6 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | Source address of the message. |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.22 ZDO_NEW_DSTADDR_IND

Description:

This callback message indicates there is a new destination address.

Usage:

AREQ: TBD

3.12.2.23 ZDO_STATE_CHANGE_IND

Description:

This callback message indicates the ZDO state change.

Usage:

AREQ:

| | | | |
|---|---|---|---|
| 1 | 1 | 1 | 1 |
|---|---|---|---|

Length = 0x01 Cmd0 = 0x45 Cmd1 = 0xC0 State

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|----------------------------------|
| State | 1 | Specifies the changed ZDO state. |

3.12.2.24 ZDO_END_DEVICE_ANNCE_IND**Description:**

This callback indicates the ZDO End Device Announce.

Usage:**AREQ:**

| | | | | | | |
|---------------|-------------|-------------|---------|---------|----------|-------------|
| Byte: 1 | 1 | 1 | 2 | 2 | 8 | 1 |
| Length = 0x0D | Cmd0 = 0x45 | Cmd1 = 0xC1 | SrcAddr | NwkAddr | IEEEAddr | Capabilites |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| SrcAddr | 2 | Source address of the message. |
| NwkAddr | 2 | Specifies the device's short address. |
| IEEEAddr | 8 | Specifies the 64 bit IEEE address of source device. |
| | | Specifies the MAC capabilities of the device. |
| | | Bit: 0 – Alternate PAN Coordinator |
| | | 1 – Device type: 1- ZigBee Router; 0 – End Device |
| | | 2 – Power Source: 1 Main powered |
| | | 3 – Receiver on when Idle |
| | | 4 – Reserved |
| | | 5 – Reserved |
| | | 6 – Security capability |
| | | 7 – Reserved |
| Capabilites | 1 | |

3.12.2.25 ZDO_MATCH_DESC_RSP_SENT**Description:**

This callback indicates that Match Descriptor Response has been sent.

Usage:**AREQ:**

| | | | |
|--------------------|---------------|----------------|----------------|
| Byte: 1 | 1 | 1 | 2 |
| Length = 0x04-0x44 | Cmd0 = 0x45 | Cmd1 = 0xC2 | NwkAddr |
| 1 | 0-32 | 1 | 0-32 |
| NumInClusters | InClusterList | NumOutClusters | OutClusterList |

Attributes:

| Attribute | Length (byte) | Description |
|----------------|---------------|--|
| NwkAddr | 2 | Specifies the device's short address |
| NumInClusters | 1 | The number of input clusters in the InClusterList. |
| InClusterList | 0-32 | List of input cluster Id's supported. |
| NumOutClusters | 1 | The number of output clusters in the OutClusterList. |
| OutClusterList | 0-32 | List of output cluster Id's supported. |

3.12.2.26 ZDO_STATUS_ERROR_RSP

Description:

This message is the default message for error status.

Usage:
AREQ:

| | | | | |
|--------------------|-------------|-------------|---------|--------|
| Byte: 1 | 1 | 1 | 2 | 1 |
| Length = 0x04-0x44 | Cmd0 = 0x45 | Cmd1 = 0xC3 | SrcAddr | Status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|---|
| SrcAddr | 2 | Source address of the message |
| Status | 1 | This field indicates either SUCCESS (0) or FAILURE (1). |

3.12.2.27 ZDO_SRC_RTG_IND

Description:

This message is an indication to inform host device the receipt of a source route to a given device.

Usage:
AREQ:

| | | | | | |
|--------------------|-------------|-------------|---------|-----------------|------------|
| Byte: 1 | 1 | 1 | 2 | 1 | 2N |
| Length = 0x04-0x44 | Cmd0 = 0x45 | Cmd1 = 0xC4 | dstAddr | Relay Count (N) | Relay List |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|---|
| DstAddr | 2 | Short address of the destination of the source route |
| Relay Count | 1 | This field indicates number of devices in the relay list of the source route. |
| Relay List | 2N | This field contains the list of devices in the relay list of the source route. It includes a two bytes short address for each device. |

3.12.2.28 ZDO_BEACON_NOTIFY_IND

Description:

This message is an indication to inform host device the receipt of a beacon notification.

Usage:
AREQ:

| | | | | |
|-------------|-------------|-------------|-------------|------------|
| Byte: 1 | 1 | 1 | 1 | N*21 |
| Length = 21 | Cmd0 = 0x45 | Cmd1 = 0xC5 | BeaconCount | BeaconList |

Attributes:

| Attribute | Length (byte) | Description |
|-------------|---------------|----------------------------------|
| BeaconCount | 1 | Number of beacons in the packet. |

An array of BeaconList items. BeaconCount contains the number of items in this table.

BeaconList
N*21
(N is
BeaconCount)

| Name | Size | Description |
|------------------|------|---|
| Source Address | 2 | Short address of the source device of the beacon |
| Pan ID | 2 | ID of the PAN |
| Logical Channel | 1 | Channel where the PAN is located. |
| Permit Joining | 1 | Flag to indicate whether the device accept association. |
| Router Capacity | 1 | Flag to indicate whether the device accept other router to associate |
| Device Capacity | 1 | Flag to indicate whether the device accept other device to associate |
| Protocol Version | 1 | Version of the ZigBee protocol. Value '1' represents ZigBee 2004. Value '2' represents ZigBee 2006/2007 |
| Stack Profile | 1 | Stack profile of the PAN: Stack Profile 1 for ZigBee and Stack Profile 2 for ZigBee Pro. |
| LQI | 1 | LQI (Link quality indicator) measurement of the beacon. |
| Depth | 1 | Depth of the source device, i.e. number of hops from the device to the ZigBee coordinator. |
| Update ID | 1 | Update ID of the device. |
| Extended Pan ID | 8 | 64 bit extended Pan ID of the Pan. |

3.12.2.29 ZDO_JOIN_CNF

Description:

This message is an indication to inform host device the result of a ZDO join request.

Usage:

AREQ:

| | | | | | |
|---------------|-------------|-------------|--------|----------------|----------------|
| Byte: 1 | 1 | 1 | 1 | 2 | 2 |
| Length = 0x05 | Cmd0 = 0x45 | Cmd1 = 0xC6 | status | Device Address | Parent Address |

Attributes:

| Attribute | Length (byte) | Description |
|------------------------------------|---------------|--|
| Return status of the join request: | | |
| status | 1 | Success (0) |
| | | ZMAC_NO_ACK (0xE9) if the chosen parent device did not respond to the association request. |
| Device Address | 2 | Short address of the device. |
| Parent Address | 2 | Short address of the parent device |

3.12.2.30 ZDO_NWK_DISCOVERY_CNF

Description:

This message is an indication to inform host device the completion of network discovery scan.

Usage:
AREQ:

| | | | |
|---------------|-------------|-------------|--------|
| Byte: 1 | 1 | 1 | 1 |
| Length = 0x01 | Cmd0 = 0x45 | Cmd1 = 0xC7 | status |

Attributes:

| Attribute | Length (byte) | Description |
|-----------|---------------|--|
| status | 1 | Return status of the network discovery. Success (0) ZMAC_NO_BEACON (0xEA) ZMAC_INVALID_PARAMETER (0xE8) if input parameter is out of valid range. |

3.12.2.31 ZDO_MSG_CB_INCOMING

Description:

This message is a ZDO callback for a Cluster Id that the host requested to receive with a ZDO_MSG_CB_REGISTER request.

Usage:
AREQ:

| | | | | | |
|---------------------------------|-------------|-------------|------------------|--------------|-----------|
| Byte: 1 | 1 | 1 | 2 | 1 | 2 |
| Length = 0x09-Max MTU length | Cmd0 = 0x45 | Cmd1 = 0xFF | SrcAddr | WasBroadcast | ClusterId |
| 1 | 1 | 2 | 0-Max MTU length | | |
| SecurityUse | SeqNum | MacDstAddr | Data | | |

Attributes:

| Attribute | Length (byte) | Description |
|--------------|----------------------|---|
| SrcAddr | 2 | Short address (LSB-MSB) of the source of the ZDO message. |
| WasBroadcast | 1 | This field indicates whether or not this ZDO message was broadcast. |
| ClusterId | 2 | The ZDO Cluster Id of this message. |
| SecurityUse | 1 | N/A – not used. |
| SeqNum | 1 | The sequence number of this ZDO message. |
| MacDstAddr | 2 | The MAC destination short address (LSB-MSB) of the ZDO message. |
| Data | 0-Max MTU length. | The data that corresponds to the Cluster Id of the message (see Reference[4], “ZDO Parsing Functions” for information on parsing the data that corresponds to each ZDO Cluster Id). |
